

# Editorial

## Dear Readers,

LFY's Fedora issue is back—thanks to the release of Fedora 14, code-named LaughLin. As always, we bring you this leading distro on the accompanying DVD, along with a detailed review on Page 55. We hope that like all earlier Fedora issues, this one, too, is a sell-out.

I believe one of the reasons behind the popularity of Fedora is that it provides a great mix of tools for software developers and IT administrators.

Following a similar strategy, we at LFY also like to offer a balance of content for both software developers and systems administrators. Of course, we never forget the newbies—after all, that's the segment that helps the overall Linux and open source movement grow.

Let's start with what's available for newbies this time. An article on open source games (Page 19), a review of the latest movie released by the Blender foundation (Page 30), and an interesting discussion with Microsoft's Vijay Rajagopalan (Page 68) on how and why Microsoft is connected with the open source world.

For the developers, there's a lot in store. Our favourites include how Python developers can boost the efficiency of their code and how you can develop dynamic applications for the Android platform using the SQLite database. An important topic that touches both developers and IT administrators is fine-tuning the performance of the MySQL database. This is discussed extensively from Page 64 onwards.

And then there are articles for IT administrators too. Top two among them—*Securing Apache* (Page 46) and the case study on Inmantec Business School's

use of Moodle to manage its courseware, helping the institute become a leader in its field (Page 72).

*By the time this magazine reaches you, our Facebook fan base should have crossed the 40,000 mark... all thanks to the knowledge sharing that's happening within the community.*

Lastly, I am more than happy to announce that by the time this magazine reaches you, our Facebook fan base should have crossed the 40,000 mark—and it's all thanks to the knowledge sharing and problem solving that's happening within the community. So if you've got a problem or want to share your knowledge, the place to hang out at is [www.facebook.com/linuxforyou](http://www.facebook.com/linuxforyou).

Look forward to meeting you there...

Best wishes,

Rahul Chopra
