

EFF announces Web encryption add-on for Firefox

The EFF has announced the availability of a new Firefox add-on called HTTPS Everywhere, which forces the browser to use a secure connection on any site that supports it. Although many websites support SSL, it isn't always used by default. This can leave users exposed to the risk of snooping and data interception by unauthorised third parties. Ylmf, Ubuntu-based Windows XP look-alike, releases v 3.0

Ylmf OS 3.0 has been released from a Chinese software maker with the familiar Luna theme found in Microsoft's Windows 7 and its predecessor Windows Vista. The Linux distro has been updated to Ubuntu 10.04, released in April, and packs OpenOffice 3.2, SMPlayer, the Audacious music player, Firefox, and the familiar Windows XP look. More

64-bit Flash for Linux dropped as Adobe preps next version

Adobe has discontinued its experimental 64-bit Flash player for Linux, citing the need for significant architectural changes to the software. The company assures users that the project hasn't been abandoned. When the 64-bit plug-in was initially made available for testing in 2008, the company promised full 64-bit support for Linux, Windows, and Mac OS X in the next major version of Flash. Two years later, we are still waiting. In its statement about the termination of the current 64-bit Linux plug-in, Adobe reaffirmed its commitment to eventually achieve full 64-bit support across all three operating systems. Linux trading system to save London Stock Exchange money

The London Stock Exchange has said its new open source-based trading system will save it at least £10 million annually, as well as driving new business. Millennium Exchange, a Linux and Sun Solaris UNIX-based platform, which uses Oracle databases, is being rolled out across all of the LSE's electronic trading systems, replacing the slower TradElect platform, which is Microsoft .NET-based. TradElect had suffered a series of high-profile outages, and will be replaced by Millennium Exchange in stages from September. More at: <http://bit.ly/LinuxTS>

OpenSSL updates fix vulnerabilities

The OpenSSL developers have released versions 0.9.8o and 1.0.0a, fixing two security problems (arbitrary code injection and an exploit to make an invalid RSA key appear to be valid). More at: <http://bit.ly/OpenSSL>

ARM, Freescale, Samsung, ST-Ericsson and TI form Linaro

ARM, Freescale, IBM, Samsung, ST-Ericsson and Texas Instruments have formed a new software engineering company, called Linaro, to enhance open source for the next generation of always-connected, always-on computing. The non-profit organisation will work to unite "...industry leaders to foster innovation in the Linux community through a common foundation of tools and software." Linaro plans to work with and invest in

Qimo 2.0 edutainment Linux released

Qimo Linux, a play-and-learn system for pre-school/primary school children, has recently released version 2.0. Based on Xubuntu 10.04, the installable live CD includes a user administration interface that enables multiple user accounts to be set up.

The system carries updated versions of Gcompris and Childsplay (educational and games collections), and the Tuxmath and Tuxpaint programs. Qimo 2.0 is available for download from its project page and via BitTorrent. Ubuntu 10.04 users can also install the *qimo-session* package from the package repositories. Parsix GNU/Linux 3.5 released

The Parsix development team has released version 3.5 of the GNU/Linux distribution, code-named Frankie. This GNOME-centric, desktop-oriented distribution is based on Debian's testing branch. The latest stable release uses the 2.6.32.14 Linux kernel, and features X.Org 7.5 and GNOME 2.28.2. It includes an improved system installer, an updated look and feel, ext4 file system support as the default option, and a new update-manager package. Package updates include version 2.6.2 of the Pidgin IM client, OpenOffice.org 3.2.0, VirtualBox 3.1.6 and Firefox 3.5.9 (as the unbranded Iceweasel). This is the first release to include the experimental USB installer, allowing users to install and run Parsix from a USB flash drive. More at: <http://bit.ly/ParsixGNU>
