

Tech Companies Queuing Up For Open Source Professionals, BIGTIME!

Open source software has, thus far, primarily been a passion for die-hard developers, with very few thinking about a long-term career in it. But with FOSS gaining popularity and reach in the IT and electronics space, the time seems right for developers to take the plunge into the open source world! Learn about the highs that come with a career in open source.

Life is a numbers game! Look around—people bet on something only if they see mesmerizing numbers. Right from a homemaker who buys bulk groceries at a mall only after she is convinced it is a ‘saving package’, to companies that watch the stock market closely, waiting for the best deals to invest in, numbers govern most of our decisions. The scenario is no different in the open source technology space. Whether it is companies working with open source or developers writing beautiful code to build a long-term career in open source, most are attracted to it due to the numbers open source is notching up in today’s IT and electronics market.

According to Gartner research, open source

products accounted for a 13 per cent share of the \$92.7 billion software market way back in 2006 and by 2011, these products are expected to make up 27 per cent of the expanding software market that is projected to touch \$169.2 billion. But, will this trend continue? Will the demand for FOSS experts grow? These are common worries for IT professionals who’re debating going deeper into the open source woods.

FOSS/Linux straddles all sectors

The good news is that not only is the demand for FOSS experts growing but the size of the open source pie is growing with the advent of Android, more open source enterprise products, the soft spot governments tend to have for open source, etc.

“Open source has become a leading trend across
