

Open Source Helps A Maternity Hospital Chain Grow Faster

LifeSpring Hospitals, an Andhra Pradesh-based maternity hospital chain, adopts open source technology to foster growth and accomplish its dream of providing high-quality affordable healthcare across India.

LifeSpring Hospitals, a low-cost maternity hospital chain in India, is giving women at the bottom of the socio-economic pyramid the opportunity to experience a safe, clean and high-quality delivery. With nine maternity hospitals currently operating across Andhra Pradesh, the company hopes to expand its reach to over 100 hospitals by 2015. LifeSpring sees open source technology as a principal catalyst to foster such growth and provide affordable healthcare.

Opening the gates to open source

A LifeSpring hospital uses a wide range of open source technology, which includes

Red Hat Enterprise Linux, JBoss Enterprise Application Platform (an application server), Zimbra (for mail and collaboration needs), Open Source Trouble Ticketing System (for tracking internal and external complaints), Elastix (a VoIP communication solution), Alfresco (a content management solution), Moodle (a learning management solution or LMS), and Zabbix (to monitor its IT infrastructure). The decision to opt for open source technology was a well-planned and well-thought-out one. "Since the inception of LifeSpring, we had a well planned road map to implement technology at various levels to automate processes and achieve higher levels of efficiency. We conducted
