

Software releases

Canonical open sources Launchpad and Ubuntu

Single-Sign-On code: Canonical, sponsor of the Ubuntu project, has announced that its Canonical Identity Provider code is now available as open source: <http://goo.gl/ImBk>.

Squeak 4.1 features improved UI: Nearly six weeks after version 4.0 arrived, the Squeak developers have announced the availability of version 4.1 of their open source implementation of the Smalltalk language and environment: <http://goo.gl/xldR>.

Opsview Community edition 3.7.0 released: Opsera has announced Opsview Community edition 3.7.0 of the network management system based on Nagios, which includes enhancements to notifications, an option to alert on every failure, and support for Ubuntu 10.04 LTS. Other improvements include SNMPv3 support with MRTG, flap detection, faster importing, and uptime checks that can cope with 32-bit counter rollover: <http://goo.gl/56cl>.

OpenSSH 5.5 brings minor improvements: Version 5.5/p1 is primarily a bug-fix version, and improves logging of authentication using client certificates: <http://goo.gl/owXa>.

VLC media player 1.0.6: This release eliminates nine security vulnerabilities, and offers increased stability: <http://goo.gl/KqoV>.

CodeWeavers releases Crossover Office and Games for Mac and Linux: Office 9.0.1 <http://goo.gl/ZVh3> and Games 9.0: <http://goo.gl/00Z1>.

KDevelop 4.0 available as a stable release after five years of development: The developers focused on making a great C++ IDE, but also included a framework to support other languages, and a PHP plugin has also been released: <http://goo.gl/HMnd> and <http://goo.gl/lcjc>.

X.Org Server 1.8.1 released: The first point release to early April's X Server 1.8 has been pushed out by Peter Hutterer. It boasts a variety of fixes and minor improvements, but major work is focused on X Server 1.9, expected in August: <http://goo.gl/0qqL>.

Open source DVR MythTV 0.23 arrives: After more than six months of development, version 0.23, the latest stable release, includes a number of updates and

new features, such as a new event system and Python bindings: <http://goo.gl/PusV>.

SpringSource releases Grails 1.3: The Grails Web application framework, built on Java and Groovy, now has more than 400 plug-ins available, and the release includes support for the recently released version 1.7 of the Groovy language (which now supports Java constructs like anonymous inner classes and nested classes, power asserts and an AST builder): <http://goo.gl/Pbb7>.

Pidgin 2.7.0 addresses emoticon vulnerability: The latest major release of the IM application includes a number of bug fixes, new features, and addresses a security issue: <http://goo.gl/zEhm>.

DOSBox 0.74 released: DOSBox, which emulates an IBM-compatible PC running DOS, has been incremented to version 0.74. Retro gamers or those wishing to run legacy applications, see the overview of changes: <http://dosbox.com/>.

JRuby boosted to 1.5.0: The Ruby implementation for the Java VM is now at version 1.5.0. After nearly five months of development work, it features improved performance, a native launcher for Unix-like platforms, and Ant support: <http://goo.gl/dTUM>.

Ruby-in-Ruby Rubinius reaches 1.0: Rubinius is a version of the Ruby language with a byte-code compiler, and the majority of the core classes written in pure Ruby. It adds a byte-code virtual machine written in C++, and incorporates LLVM to compile the byte code to machine code at run-time. The 1.0 release, named Fabius, is the culmination of three and a half years of development since Evan Phoenix began the project: <http://goo.gl/VYNx>.

Social networking platform eXo Social out: eXo has announced the release of eXo Social 1.0, an enterprise social networking package that supports OpenSocial, under an AGPL licence. eXo Social is bundled with eXo's Gateln 3.0 and Tomcat 6.0 to allow users to configure a social network "out of the box": <http://goo.gl/qOSL>.

Samba update fixes DoS vulnerabilities: The Samba 3.4 update, version 3.4.8, fixes various holes, including two DoS vulnerabilities which allow attackers to remotely crash the smb service. Both flaws were already fixed in April in version 3.5.2. Users are advised to install one of the new versions ASAP, since exploits are already public: <http://goo.gl/Q8x4>.
