

The GIMP Beginner Tutorial

'The Menacing Path'

Welcome to the seventh tutorial in the GIMP series. Here we unravel the venerable paths tool, using it to create an extraordinary wallpaper. Apart from a focus on the paths tool, we will explore some nifty additions from the vast tools barracks.

Since working with the paths tool can be quite time consuming and hectic, I recommend following this tutorial, step by step. It gets easier once you understand how we achieve the effect in the wallpaper. After that, it's just a matter of time before you start creating your own stunning wallpapers!

 **Note:** I have segregated the tutorial into two major parts—colouring and shaping. The former is subjective—it varies according to your preference. I have used multiple gradients over many layers to provide a golden/rust brown combination. Feel free to exercise your imagination while choosing colours. So, let's get started with our wallpaper.
