

Sticker and Windows Tax Aside, MSI CR620 is Friends with Linux

Time to dump the Core-2-Duos and start looking for those Intel Core i3s (or i5 and i7, if you have the money). You ask why? Well, it's about time you got rid of that performance bottleneck on Intel CPUs brought to you by the FSB.

[GNU/Linux on the go! Is that even a concern any more? Well, it seems it still is, as my friend Boudhayan Gupta would have you believe on pages 22-24. And reading his article, and the troubles he faced with an Ubuntu-preloaded laptop, you can't even ignore it, can you?

On the contrary, the MSI CR620 laptop that

currently comes preloaded with Windows 7—sources close to the brand say the company has plans to float FreeDOS-based models soon—is said to be a different story. MSI's agenda is to push the notion that “all hardware components of [this] MSI notebook support [GNU/Linux].”

Well, when I first laid my hands on the CR620 a couple of months back, I tried four
