

Open Source

The New Mantra for Business Innovation

Delhi-based Srijan Technologies has been successfully innovating and experimenting with business models to emerge as a true icon in the open source arena.

"I can get better," is what Barcelona superstar Lionel Messi had to say after his masterful four-goal performance against Arsenal in the Champions League 2010 quarter-final. Born with a growth disorder, no team was prepared to back the rare condition that plagued Messi. But his fate soon led him to Barcelona and there has been no looking back since.

Messi's story is about the victory of skill and will over hardship. The story of Delhi-based Srijan Technologies, an IT company working on Drupal, TYPO3, and Django, runs along similar lines. After a pitched battle against mindsets, a talent crunch and strong proprietary competitors, Srijan has emerged triumphant with a successful open source business model. Growing at roughly 15 per cent today, Srijan has achieved revenues of nearly Rs 2 crores.
