

You said it...

Linux A/V editing software

I've been a regular reader of this magazine since 2007. I have subscribed to *LFY* for the last one year and can now say you have improved a lot in your delivery system. For the first time I got the magazine on the 5th of this month.

I really appreciate you guys for the effort. As we all know, there aren't many good media editing tools on Linux. However, as I only use Linux and sometimes need to encode videos/audio I hope you will soon publish some articles on this topic and also provide the tools on your disks.

— Pankaj Tanwar, pankaj.tux@gmail.com

ED: Thanks for your compliments regarding delivery. We understand it's often not up to the mark, but we're trying to fix the roadblocks.

As for articles on media editing tools on Linux, we've published articles on the subject on and off. However, your e-mail has inspired us to roll out a possible special issue addressing this topic in the coming months. For the time being, please take a look at http://en.wikipedia.org/wiki/List_of_video_editing_software#Open_source_software and http://en.wikipedia.org/wiki/List_of_Linux_audio_software. Most of these applications are available in the software repositories of Linux distributions. We hope you will try out a few and send us your feedback.

A few things *LFY* can improve on

I have been a regular *LFY* subscriber for more than two years now. I congratulate you on producing a

high-quality FOSS and technology magazine—I would go as far as to say that *LFY* serves as kind of my monthly news magazine for technology updates on all fronts—FOSS, hardware, hobbyist, etc.

However, I feel *LFY* still needs some improvement:

1. Please start a regular column/article on BSD.
2. Also, do include a feature on alternative OSs like Syllable, ReactOS, GNU Hurd, etc. I appreciated your recent article on HaikuOS, but it would be great if you made it a regular feature. Please also start bundling ISO images or multi-boot CDs/DVDs for these alternate OSs. Normally, their sizes are small so bundling a multi-boot CD would be great.
3. If you can start building a generic DVD/CD with general packages like OOo, programming tools (GCC, clisp, etc), IDEs (Eclipse, Aptana, Andriod SDK, etc), alternate desktops, graphics and animation software (Blender, Inkscape, etc) in RPM, deb and tarball formats, it would be awesome. I understand that such a bundle will require a mammoth effort, but once in six months or a year should be fine, as Internet connections are still not very good in our country, plus broadband is quite costly. I personally use a GSM connection with less than 100 KBps.
4. I am still unhappy with your online renewal system, which runs on an ASP server. I am not able to use this from my Firefox browser in Ubuntu. Also, using an MS proprietary-based site for payment in a FOSS-dedicated magazine does not look good.
