

OlivePad

India's First Android 3.5G Tablet PC

Olive Telecom has beaten Apple on one count. It has launched its touchscreen tablet, the OlivePad, in India, months before the iconic iPad. Now, it remains to be seen whether Olive's first-mover advantage, coupled with the OlivePad's additional features, can grab the market.

*I*t is the clash of the tablet PC titans in India! While Bangalore-based Notion Ink's Adam and Apple's iPad created waves, both are slated to hit the Indian market only by the year-end. Meanwhile, Olive Telecom has launched the OlivePad—India's first 3.5G Android tablet PC. Priced at Rs 25,000 (inclusive of the memory card), this 17.78 cm (7 inch) 800x480 capacitive touchscreen device beckons gadget freaks at Croma stores. Olive Telecom is betting on OlivePad's features, coupled with its first-mover advantage, to sweep the Indian market.

"We are looking at OlivePad as the ultimate touchscreen to replace others. Our first-mover advantage, coupled with the additional features of it being a smartphone with cameras, makes for a compelling consumer statement. We are looking at a market size of over a 100,000 this

calendar year," says Arun Khanna, chairman, Olive Telecom.

However, with the Android OS devices frenzy still to catch on in India, the road is not hassle-free. "Being the first in the market comes with challenges too, not just advantages. On one hand, we are looking at concentrating on promoting OlivePad, and not open source/Android, per se. Along with that, we are working on playing an educative role (with respect to open source) while stressing on our product's plus-points," says Khanna.

Features—the game winner for Olive Telecom

"It is a true convergence device that brings together computer, mobile phone and entertainment features on to one platform. It promises easy on-the-move connectivity, making it the consumer's true window to the world. This
