

A quick comparison

	 iPad	 OlivePad	 Adam Tablet
Specifications			
Screen size	24.6 cm	17.7 cm	25.4 cm
Processor	1 GHz	600 MHz	1 GHz
Operating System	iPhone OS	Android	Android
Memory	64 GB	32 GB	32 GB
Camera	No	3 Megapixel	3 Megapixel
3G	Yes	Yes	Yes
Wi-Fi	Yes	Yes	Yes
GPS	Yes	No	Yes
Digital Compass	Yes	No	Yes
Accelerometer	Yes	No	No
Price	Rs 32,000 to 36,000 (approx.) depending on configuration	Rs 25,000/-	Rs 15,700 - 38,400 (approx.) depending on configuration

specific to the device enough, especially when the main competitor, Apple's iPad, has the backing of 200,000 applications from the Apple App Store, of which 23,000 are exclusively for the iPad? "We have an in-house application development team, but it is a huge challenge to develop everything internally. We do realise the need to collaborate with third-party developers, and are in talks with them to create apps that can be found on the OlivePad. We are already receiving calls to build consumer and enterprise applications for OlivePad. We are mostly looking at embedding applications with a local flavour. We also plan to have a developer challenge to build Android applications specific to the OlivePad, and will offer incentives to third-party developers, similar to our competitors," says Keote.

Support has been a constant problem for open source OS devices. The OlivePad, however, has a good strategy. Apart from the India service network of 211 customer-friendly service centres, customer care will be available on a toll-free dial-in number, 1800 266 65483. Along with this, Google will provide support for the OS, but inherent software issues pertaining to the OS and embedded applications will be taken care of by Olive Telecom.

Other features

The OlivePad comes with a 3240 mAh battery, providing

400-500 hours in standby mode. The display is power efficient; and the device offers micro-SD card storage, expandable up to 32 GB. The OlivePad is based on the new Qualcomm MSM7227 chip-set, which, according to Keote, fitted right into the firm's strategy of going for neither a very high-end nor a very low-end processor. "The 600 MHz Qualcomm processor is just right for the OlivePad, in terms of processing speed. Further, it gave us the leverage to launch the OlivePad as a video/voice device," says Keote.

Roadmap for the future

Looking ahead, Olive Telecom is working on upgrading the OlivePad to Android 2.2 (Froyo), and expanding to other markets. "Starting from India, we will be looking at the Indonesian and Philippine markets in Asia, and then moving forward to Russia, Belarus, etc. There has been significant interest even in the UK and America. Our strategy will remain similar—with a local accent," says Khanna.
