

```
nisMapName: auto.home
[root@vbg migration]#
```

Let's add this data to our directory:

```
[root@vbg migration]# ldapadd -c -x localhost -D
"cn=Manager,dc=knafl,dc=org" -W -f /tmp/autoldif
```

Enter the LDAP password:

```
adding new entry "nisMapName=auto.master,dc=knafl,dc=org"
adding new entry "cn=/home/userhome,nisMapName=auto.
master,dc=knafl,dc=org"
```

```
adding new entry "nisMapName=auto.home,dc=knafl,dc=org"
adding new entry "cn=",nisMapName=auto.home,dc=knafl,dc=org"
```

```
[root@vbg migration]#
```

Our directory is ready; now configure the client. For autofs configuration, the file to edit is: /etc/sysconfig/autofs. I have uncommented the following entries:

```
MAP_OBJECT_CLASS="nisMap"
ENTRY_OBJECT_CLASS="nisObject"
MAP_ATTRIBUTE="nisMapName"
ENTRY_ATTRIBUTE="cn"
VALUE_ATTRIBUTE="nisMapEntry"
```

...and set the values of the following two entries:

```
LDAP_URI="ldap://192.168.122.1/"
SEARCH_BASE="dc=knafl,dc=org"
```

Finally, I also commented the map declaration in the file /etc/auto.master to ensure that the auto-mounts would take place through LDAP only, as can be seen below:

```
[root@rdso ~]# cat /etc/auto.master | grep home
#/home/userhome /etc/auto.home
[root@rdso ~]#
```

Now restart the autofs service and check =>

```
[root@rdso ~]# /etc/init.d/autofs restart
Stopping autounmount: [ OK ]
Starting autounmount: [ OK ]
[root@rdso ~]# su - vbg1
[vbg1@rdso ~]$ df -h
```

```
Filesystem      Size  Used Avail Use% Mounted on
/dev/mapper/Vol1Group00-LogVol00
                8.6G  5.3G  3.0G   64% /
/dev/hda1        99M   13M   82M   14% /boot
tmpfs            250M    0  250M    0% /dev/shm
192.168.122.1:/myusersdata/vbg1
                19G   17G   1.6G   92% /home/userhome/vbg1

[vbg1@rdso ~]$
```

It works. Now as a sysadmin, all you need is to install a Linux system (from a kickstart preferably that also creates the desired /etc/sysconfig/autofs), add a new user to LDAP, create the user's home folder in the NFS share, and lo and behold, the roaming profiles are activated!

Note to readers: I must apologise if I've been unable to respond to your mails about the previous article. I have been travelling a lot, and that is the primary reason for this sloppiness on my part. By the time you get a copy of this article, your queries and suggestions will be given the attention they deserve.

Please feel free to send in your questions, doubts, comments, bouquets and brickbats to varad.gupta@fosteringlinux.com. I really appreciate the mails that I receive....
