

example Wave server and Web client into a more complete application or 'Wave in a Box'."

According to North, the project will include:

- An application bundle, including a server and Web client supporting real-time collaboration using the same structured conversations as the Google Wave system
- A fast and fully-featured wave panel in the Web client with complete support for threaded conversations
- A persistent wave store and search implementation for the server (building on contributed patches to implement a MongoDB store)
- Refinements to the client-server protocols
- Gadget, robot and data API support
- Support for importing Wave data from wave.google.com
- The ability to federate across other 'Wave in a Box' instances, with some additional configuration

After Google came out with the announcement to terminate the Wave service, it has since announced that Wave will be running now, so that users can extract all the information that it has on Wave. The Wave service will be finally closed down some time next year. However, no schedule for the release of 'Wave in a Box' has been announced.

XBMC announces Dharma beta 1

XBMC 10.0 beta 1 is finally here after over nine months of development. Code-named 'Dharma', the first beta of version 10.0 of the open source media player introduces a new add-on system that allows script-writers, skinnners and designers to customise a user's XBMC experience. It also features hardware acceleration support for video playback, better 64-bit Linux support, various Web server improvements and support for WebM video.

This device has Nokia's body and Android's brains

Some enthusiastic developers have created a version of the Android operating system which is compatible with Nokia's Internet tablets and phones. Developers have created the versions for various devices including N900, reports Wired.com. "Nokia's hardware is fantastic but their software is suboptimal, slow, buggy and does not always offer the best user experience. Android is a much better software environment for Nokia hardware than what Nokia provides," says Terrence Eden, a UK-based mobile consultant who installed the Android 1.6 'Donut' on his Nokia N810.

ViewSonic launches the ViewPad 7

Last month saw the launch of ViewPad —a multi-functional, multimedia, Android-enabled device. Launched by ViewSonic, ViewPad 7 is an Android 2.2, 3.5 G-enabled tablet with a phone function. It supports data and entertainment functions, boasts of a large screen for maximum visual enjoyment and is readily portable for those on the go. Users can tap into GMS to access the Internet, GPS/A-GPS to find their latest bearings, receive and send e-mail, network with friends on Facebook, Plurk or Twitter, anytime and anywhere. They can download all types of applications from the Android Market and customise their ViewPad7 multimedia interface, the company claims.

ViewPad 7 also comes embedded with a camera. According to the company, this camera allows users to take pictures, edit and upload them to Facebook or Picasa. ViewPad 7 also has a video conferencing camera at the front. ViewSonic included these two functions to resolve user complaints. According to company sources, it is planning to launch this product in the Indian market very soon.
