

Motorola takes the Android experience to new levels in India

Taking the Android experience to a whole new level in India, handset maker Motorola has rolled out two new Android-based smartphones – the Milestone XT720 and the Backflip.

Powered by Android 2.1, the Milestone XT720 comes packed with an 8-megapixel camera with Xenon flash, a 10x digital zoom and a high-resolution 720p HD camcorder. A suite of Google mobile applications, including Google Search, Google Maps, Gmail and YouTube are also integrated onto the device.

Motorola touts the Backflip with the Backtrack feature as a handset that maximises multi-tasking, and allows easy access to videos, music and photos while churning through e-mails, texts, news feeds, social network messages and more.

Milestone XT720 is priced at Rs 34,990 and comes with an 8 GB memory card and HDMI cable for output to HDTV. Backflip costs Rs 22,990 and comes with a 2 GB memory card.

IBM unveils its biggest UNIX server to date

IBM has unveiled the Power 795, its biggest UNIX server ever. Based on IBM's Power7 processors, the Power 795 is the company's new 256-core UNIX server, meant for large enterprises that run large-scale database applications or want to consolidate multiple UNIX or Linux workloads onto a single system using IBM's PowerVM virtualisation software.

An 'open' initiative to return man to the moon!

The concept that drives the open source movement, i.e., the idea of sharing, collaborating and community involvement in projects, is fast gaining traction amidst other domains as well. The OpenLuna Foundation, a volunteer organisation, was founded with the aim to return man to the moon through private enterprise. According to the details cited on the project website, this includes a staggered programme of robotic missions and a short series of manned missions to construct a small, six-person settlement based at a location scouted by the robotic missions.

Ubuntu 11.04 release scheduled for April 28 next year

"The world of free software is the platform upon which the future is being built," said Mark Shuttleworth, the father of the popular Ubuntu operating system, while announcing the name and goal of the next version of Ubuntu. The next version of Ubuntu has been codenamed Natty Narwhal (which Wikipedia says is a medium-sized toothed whale that lives year-round in the Arctic). Ubuntu 11.04 will arrive on April 28, 2011 and is likely to have the GNOME 3.0 desktop environment along with the GNOME Shell. More at: <http://bit.ly/Ubuntu11-04>
