

## Red Hat, Wipro join hands to deliver open source across India

Red Hat and Wipro have joined hands to offer open source solutions to enterprises in India. According to Red Hat, both organisations plan to collaborate in building integrated solutions on Red Hat technologies through joint investments in Wipro's Centre of Excellence in Bengaluru. The objective is to build frameworks and platforms that can be readily replicated and customised by architects and developers to create solutions for industry verticals, including telecommunications, banking, financial services, insurance, government, defence and utilities industries. Now customers in India have the choice to evaluate, select and use open source solutions from Red Hat with implementation, delivery and support services from Wipro.

## The beta phase of the semYOU Web OS has begun

**semYOU**

The official beta phase for the German start-up company, semYOU's first semantic Internet operating system, started on August 4, 2010. The OS works across different browsers such as Internet Explorer, Firefox, Opera or Google Chrome, without any special installation or updates.

Also, users get an option to call on individual semYOU applications via the local desktop. With semYOU, existing data, documents and e-mails can be easily imported via drag and drop.

"My goal was to create a free and especially secure system with which all important everyday Internet functions can be easily carried out—regardless of when, who and with what PC," explains Volker Jahns, general manager of semYOU.

## SUSE Studio users get free venue to publish Linux apps

Novell has released SUSE Gallery, a new free online showcase for registered SUSE Studio users to publish and market their appliances and cloud-based applications. ISVs, corporate developers and enthusiasts can now share, promote, collaborate and freely exchange their appliances with others. SUSE Gallery targets developers and other users searching for commercial and community-oriented appliances. Appliance templates and tailored operating system images can also be published, facilitating reuse that further accelerates appliance development. Each published appliance will have a dedicated Web page with a unique URL, making it possible for software vendors to conduct targeted marketing and sales campaigns, besides tracking results.
