

Software	New features / Major updates	Download@
Ubuntu 10.04.1 LTS (Lucid Lynx)	First maintenance release of Ubuntu 10.04 LTS, it includes updated server, desktop, and alternate installation CDs for the i386 and amd64 architectures.	http://bit.ly/Ubuntu10-04-1
Trinity Rescue Kit 3.4	Addition of a text-based, scrollable menu interface. Feature additions like 'winclean', a home brewed utility to perform offline Windows disk cleaning, a new virus scan engine in the seriously debugged virus scan tool.	http://bit.ly/TRK3-4
Puppy Linux 5.1	Code-name 'Lucid'. A full-featured compact distro. Quickpet and Puppy Package Manager allow easy installation of many of the best Linux programs, tested and configured for Lucid Puppy. It boots directly to an automatically configured graphical desktop.	http://bit.ly/puppylinux
Vim 7.3	Persistent undo and undo for reload; Blowfish encryption; encryption of the swap file; conceals text; Lua interface; Python 3 interface	http://bit.ly/vim7-3
Ruby 1.9.2	Many new methods; new socket API (IPv6 support); new encodings; random class that supports various random number generators; time is reimplemented; there is no longer the year 2038 problem; some regexp enhancements; \$: no longer includes the current directory; dl is reimplemented on top of libffi; new psych library that wraps libyaml.	http://bit.ly/ruby1-9-2
Firefox 4 Beta 3	Built-in support for multi-touch on Windows 7; enhanced graphical experience; improved JavaScript engine that allows for faster number-crunching.	http://mzla/firefox4-3
Thunderbird 3.1.2	Code name 'Lanikai'. The latest maintenance update addresses several user experience concerns and improves the application's overall stability.	http://bit.ly/Thunderbird3-1-2
OpenOffice.org 3.3 Beta	Language selection through Windows language bar extended to Western languages; support of digit grouping as used in India; File -> Properties now has an extra tab for security options; database / insert menu, new menu item; Database / Edit Menu / Delete Record, etc.	http://bit.ly/Openoffice3-3Beta
Pre-release version of Linux 2.6.36	Has hundreds of new and extended drivers, including a driver for intelligent power sharing (IPS), which allows graphics chips in some mobile Intel Westmere processors (such as the Core i5) to overclock the processor when it is not using its full thermal budget. Also new are an interface for the Licr userspace daemon in the infra red remote control subsystem introduced in 2.6.35, and a number of drivers dependent on it; several changes to kernel infrastructure, such as concurrency managed work queues and a reworked out-of-memory (OOM) killer.	http://bit.ly/Linux2-6-36RC
