

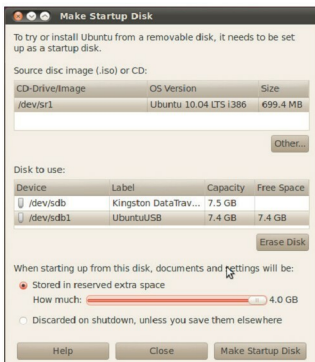

Figure 1: Startup Disk Creator utility

does not require a working Internet connection, and provides better privacy and security. After all, your pocket Linux always remains in your pocket!

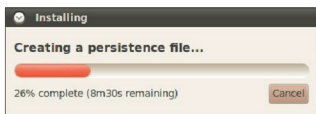

Figure 2: Installing the live USB system

Prerequisites

Here is a check-list of the things you need to collect, to create your very own personalised pocket penguin:

- A host system (your computer + your OS).
- A live USB creator tool.
- The ISO image file of the target distro—download it from one of the distro's mirror sites, or from *distrowatch.com*.
- A USB flash drive with enough space to store the distro along with the other files you intend to carry around. The minimum recommended is 1 GB; if the idea is just to have your bookmarks, network settings and a few small files, then this is enough. But if you want to install loads of programs, and store project files, music and a lot more, 4 GB or more would be a good idea. While using a flash drive as a live USB potentially reduces its life due to the large number of write operations, the ever-decreasing price of these storage devices nullifies such worries.

SysAdmin Training by TUXG

Want to become a better Unix/Linux SysAdmin?
Come join our training programs and learn things the right way.

For practical IT exposure, join our SAMIR program, a hands-on learning experience that moulds you for the IT industry.
