

- 3) Restart the system.
- 4) Boot the 2.6.24.3 kernel, and log in as the root.
- 5) Install ALSA modules for sound card support, which can be downloaded from [ftp://images.bosslinux.in/ncomputing/alsa-modules-2.6.24.3_1.0.16-1+2.6.24.3-10.00.Custom_i386.deb](http://images.bosslinux.in/ncomputing/alsa-modules-2.6.24.3_1.0.16-1+2.6.24.3-10.00.Custom_i386.deb)

```
dpkg -i alsa-modules-2.6.24.3_1.0.16-1+2.6.24.3-10.00.Custom_i386.deb
```

- 6) Install the X-series vspace package, which can be downloaded from [ftp://images.bosslinux.in/ncomputing/xseries_3.0_i386.deb](http://images.bosslinux.in/ncomputing/xseries_3.0_i386.deb)

```
dpkg -i xseries_3.0_i386.deb
```

Alternately, you can install the downloaded package using GDebi, by double-clicking the package file. Among the various steps, you will be asked to accept licensing terms, and the terms of use statement.

- 7) Change the GDM settings—edit the `/etc/gdm/gdm.conf` file to reflect the following changes:

```
[daemon]
DynamicXServer=true
[xdmcp]
[gui]
[greeter]
SoundOnLogin=false
[chooser]
[debug]
```

- 8) Shut down the system.
- 9) Connect the X-series card in the PCI slot of the server system.
- 10) Connect the client node ("X-box") to the X-series card, using a network cable.
- 11) Connect the monitor, keyboard and mouse to the "X-box".
- 12) Start the system, and as before, boot the 2.6.24.3 kernel. On the connected client, you should see the BOSS login GUI, just as on the server.
- 14) The client can be configured and partially controlled using the NComputing console, accessible via `Syst em → Administration → NComputing Console` on the server.
