

Web technologies to develop applications that can operate across multiple device segments like tablets, smartphones, smartTVs, netbooks and in-vehicle infotainment.

The official announcement from Tizen says that compared with the earlier code preview, the beta has additional features, tools and other improvements. These include: SDK support for Windows and Ubuntu; the SDK source code is now available; the Tizen Web UI framework extends jQuery Mobile to make developing Web applications easier with optimised widgets; the Tizen Web API provides more features, such as setting an alarm, accessing media content, retrieving system information, and more.

The world's smallest Linux-based computer up for pre-order

FXI Technologies showcased its USB-drive-sized computer dubbed 'Cotton Candy' at CES 2012. The company has now said that Cotton Candy is available for pre-order. The retail price of the 'world's smallest computer' is \$199 excluding taxes. The computer is expected to ship sometime in March 2012. The USB stick-sized computing device runs Android 4.0 and Ubuntu. The device is reportedly technically capable of running Windows 8 as well, since ARM is a supported architecture. The Cotton Candy provides users with a single, secure point of access to all personal cloud services and apps through their favourite operating system, while delivering a consistent experience on any screen.

This powerful device will support a slew of devices and platforms. The Cotton Candy USB stick will serve as a companion to smartphones, tablets, notebooks and Macs. It will let you add smart capabilities to existing displays, TVs, set-top boxes and other media that supports USB mass storage.

This tiny computer has a small form factor but offers relatively high specs, which makes it a compelling choice for Linux enthusiasts. The Cotton Candy comes equipped with an ARM Cortex-A9 (1GHz) CPU from Samsung, an ARM Mali-400 MP (Quad-core, 1.2GHz) GPU, Wi-Fi, Bluetooth, and HDMI output. The power-packed stick decodes MPEG-4, H.264 and other video formats, and displays HD graphics on any HDMI-equipped screen. Users can control content via smartphones, keyboards, mice and other USB peripherals.

Facebook plans new open source data centre

The open source platform seems to have caught the fancy of the largest social networking site, Facebook. The Linux kernel that drives over 90 per cent of the world's fastest supercomputers also powers the extensive back-end operations of tech giants like Facebook and Google.

Considering its massive user-base of 845 million, Facebook has announced plans of building its own storage hardware. The company intends to share details about this so other companies can make their data centres more efficient. The designs are likely to be out in May this year. The company's move comes nearly a year after it started publishing the design specifications of its own custom built servers.

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!
