

service. For developers to qualify for a free account, they must be writing free software (as defined by the Debian Free Software Guidelines or the OSI Open Source definition), the project must also have "something to do with the Web" and the developers will need to place a link back to PageKite on their respective websites, the company said.

Ruby on Rails updated to version 3.2.2

The developers have updated Web application framework Ruby on Rails to fix two important security issues. However, these fixes are said to be unrelated to the recent issues with GitHub and Rails. The developers suggest that users should upgrade their installations as quickly as possible due to the serious nature of the security flaws, which have now been fixed. Some highlights from this release are: log files are always flushed; failing tests will exit with non-zero status code; and the elimination of calls to deprecated methods.

Open Invention Network expands Linux System technologies

Open Invention Network (OIN) has expanded and updated the Linux System technologies covered by its network of royalty-free cross-licences among hundreds of OIN licensees. Over 700 new software packages will now receive coverage; these include popular packages such as KVM, Git, OpenJDK, and WebKit. In addition, OIN has announced that coverage for over 1,000 existing software packages has been updated.

The improved coverage of the OIN licence is expected to help encourage ongoing collaboration and investments from Linux developers, distributors, sellers, resellers and end users.

Patents owned by Open Invention Network are available royalty-free to any company, institution or individual that agrees not to assert its patents against the 'Linux System'.

With its licence, OIN said it is disseminating protections, including patent cross-licences and releases from claims of patent infringement among its licencees, which in turn encourages collaboration.

Android Market rebranded as Google Play

Now, when you want to purchase Android apps, videos, music and electronic books on the Web, don't be alarmed to see them all under the name Google Play, since that's what Android Market has been renamed. This has been done in an effort to enhance its profile in the electronics sale market and to give good competition to Apple and Amazon.

Also, the fact that the apps were available both on the Google website and the Android Market confused customers. Currently, there are more than

Version 7.1 of Linux From Scratch published

The Linux From Scratch (LFS) book helps enthusiasts use another system to build their own Linux system. The LFS project has now come up with version 7.1 of its manual for building a custom Linux installation. It is 345 pages long, and uses the 3.2.6 Linux kernel and version 4.6.2 of the GNU Compiler Collection (GCC). The new release also offers fixes to bootscripts and corrections to the text. The developers have also added updates to 20 packages in this release.

MIT launches App Inventor beta

The Massachusetts Institute of Technology Center for Mobile Learning has announced the first beta version of MIT App Inventor. The App Inventor was first launched by Google in mid-2010 but it was discontinued and open-sourced in 2011. The software is aimed at helping non-developers build their own apps with a simple web-based interface.

App Inventor will now be suitable for any use, including running classes. But this is the first time the system will be subjected to the load from a large number of users so there may be bumps and adjustments as the number of users increase, MIT warns.

For now, it is recommended that you maintain backup copies of important apps.

Akka 2.0 fixes over 700 bugs

The Akka project has announced the availability of version 2.0 of its open source framework for concurrency-focused application development using

Java and Scala. The developers said they have fixed more than 700 bugs in the new release. "It's not just a version bump," explained a developer about the changes throughout the 300 pages of documentation. Akka 2.0 is licensed under the Apache Licence 2.0.
