

As an enterprise architect, you must find new ways to increase the agility, flexibility and speed of software development, while managing and controlling risk and cost.

Black Duck helps you achieve these goals with tools that automate the use and governance of open source software (OSS) in your organization and development lifecycle.

- **Make better software, faster with the right code choices**

Direct access to billions of lines of the latest OSS code with full transparency into licensing data and security vulnerabilities. Why reinvent the wheel?

- **Control development, maintenance and support costs**

Create a catalog of approved components to promote code reuse and decrease the amount of new and redundant code developers need to write.

- **Ensure compliance**

Automate the monitoring, validation and control of OSS to assure management and customers that your software is fully compliant with your internal policies and license obligations.
