Figure 6: Recovery in progress

Figure 7: Recovered files and folders

go to *Options* to select a specific type of file to recover (e.g., Figure 3). Select which types to recover.

- As you can see in Figure 4, I have 'unticked' the last four file types, such as bmp, bkf, etc. After you are done, quit and return to the main menu.
- Select the file system of the partition on which your data was stored, as shown in Figure 5.
- Proceed with the recovery (similar to Figure 6). This will take a long time, so be patient.

After the recovery is done, you will get a lot of folders, as shown in Figure 7. It's up to you to search through them for the data you want to keep. You can now unmount or eject the partition/disk to which recovered files were stored, shut down and reboot the normal distribution you were using earlier, and dig through the recovered files from it, if you prefer to. In the second part of this article, I will discuss data recovery using more advanced tools. **END**
