## Getting started with a career in Linux

I like your magazine very much. It has always helped me get the right information at the right time. Actually, LFY was the starting point of my Linux journey. Now I am so interested in the field of Linux development that I am keen to have a career in this field. So I am more than willing to take up jobs related to Linux administration and RHCSA certification. However, most of the job vacancies posted on the Web ask for experience. I have just completed my BTech in Computer Science last year. Given my qualifications, what are the chances of freshers securing a good job with a good pay? As a magazine dealing with Linux and open source, it would be great if you could pass on some useful knowledge in this regard.

**ED:** It really excites us to know that LFY was instrumental in your embarking on a Linux related career! Our best wishes are with you. It might benefit you to do a certification course in any Linux related field to enhance your skill set even further. However, at the moment, you can check out our FOSS Jobs section that we publish in our magazine. We also regularly carry interviews related to recruitment trends in the FOSS industry. These interviews feature expert opinions on diverse topics

related to the required skill sets, the demand for freshers, on-the-job training programmes, etc, in the Linux domain. For your reference, here are the links to some of these interviews that have been carried in LFY in the recent past:  
<http://bit.ly/wYhH6Q>  
<http://bit.ly/z8pRhP>

It might also interest you to know that the current edition carries an article titled, 'It Pays To Be A Linux Expert'. This would give you an idea about the existing scenario in terms of remuneration for both freshers and experienced Linux professionals. We recommend you read this as well.

Really hope this helps. Do keep us posted on your Linux journey.

## Help with Ubuntu required!

I would really like to congratulate Team LFY for doing such a tremendous job on covering technology related to Linux and open source. Your magazine is very useful and has made me deeply interested in the open source world. However, I would like to share some suggestions with you.

- 1) Ubuntu is a good operating system for netbooks and laptops but I sometimes get confused as it doesn't provide software packages such as Fedora. I am a second year BCA student. Since it is useful for my career, I would like to get all the packages of Ubuntu in an installable DVD form.
- 2) You had bundled the Linux Mint 12 in the February 2012 issue of LFY but it is not as fast as Ubuntu. It lacks certain design elements when it comes to themes, the

interface, fonts, etc, in comparison to Ubuntu.

- 3) I am also facing a problem with the Ubuntu boot loader. How do I edit bootimage in the Ubuntu system? I am aware that it is the grub.conf file in the etc directory but I am getting a grub2 there instead. I am unable to locate it.

**ED:** Thanks for your detailed feedback. Regarding Points 1 and 2, we have conveyed your suggestions and concerns to our DVD team. Hopefully, we will be implementing your valuable tips in our upcoming DVDs. Regarding Point 3, it might be a good idea to join our magazine's Facebook page at <http://www.facebook.com/LinuxForYou> and post your technical queries there.

We are proud to share with you that we have an active community of more than 1,85,000 members on our Facebook page. Addressing all your technical queries to this huge community of serious FOSS lovers might not only resolve your own technical doubts, but give you a chance to address other members' queries as well! Do try it out and let us know in case you face any other issues.
