G'Five launches five Android phones in India

Chinese mobile phone manufacturer, G'Five International Ltd, has launched five Android smartphones in the range of Rs 6000-12000. The company is focused on cashing in on the mobile Internet phenomenon in India. All the five smartphones from G'Five come packed with mobile Internet technology called 'G-Cloud', which provides 5.55 GB of cloud storage for consumers to store valuable data and easily synchronise data with their laptops, phones, tablets and netbooks. So, even if you lose your mobile phone, your data (contacts, messages, music, etc) is stored in the cloud. It means that users can access all their data even if they lose their smartphone. They can transfer the data from their lost phone to the new G-Five phone with just a single click via G-Cloud.

The specifications of the devices:
