

YOU SAID IT

The LFY team deserves a pat on the back!

First of all, I would like to congratulate the LFY team for such a fabulous performance and for consistently improving the quality of the magazine. I have been reading LFY since 2009. I really marvel at the way LFY has converted me into a dedicated and satisfied Linux user. Currently, I'm studying for my masters in Computer Engineering from an elite institute in Mumbai. Being a final year student, I want to do my project or research internship in open source and Linux.

Could you kindly guide me by answering the following questions:

1. Are there research or project internships in India for a period of 6-8 months?
2. Which organisations are ready to take on interns like us?
3. How can we contribute to the development work happening in India?

ED: Thanks a lot for your wonderful feedback. Mails with such enthusiastic appreciation always egg us on to keep the good work going. This also helps us consistently deliver to our readers' satisfaction. It is indeed great to hear that you have realised the significance of FOSS and are even thinking of making a career in the field. I would suggest that you post this query on our Facebook page <http://www.facebook.com/LinuxForYou> as you would get a number of varied replies. And we are sure this will definitely help you in your future endeavours.

Fedora 17: A unique experience!

I really enjoyed using the Fedora 17 DVD that was enclosed with the July 2012 issue. It was indeed a unique experience. I would appreciate it if you could let me know more about software testing. Could you write about it in upcoming editions? Looking forward to your next issue.

—T Janakiraman,
Tirupur

ED: It indeed gives us great pleasure when our readers update us on their experiences with LFY. We will definitely try to cover software testing in future editions. Keep reading LFY!

jQuery, well explained!

I liked the article 'Programming with jQuery'. I am a professor who believes in conceptual teaching. I was in search of some good and simple references for jQuery (along the lines of 'write less, do more') so that I could share them with my students. The way the author explained the subject with appropriate figures was

exemplary and quite understandable.

The 'Developer's Column' is another wonderful feature of your magazine. Thank you LFY for guiding me with regard to open source software. I currently teach OSS in our college (Sona College of Technology, Salem, Tamil Nadu).

—AC Kaladevi,
kaladeviac@gmail.com

ED: Thanks for your feedback. We will definitely convey your compliments to our author, Janardan Revuru. We aim to continue publishing well-informed articles so that our readers get to know anything and everything about OSS. Happy reading!

facebook CORNER

Need a tutorial on CentOS 5

Rajnish Singh:

Hi LFY! Can you provide a tutorial on application clustering in CentOS 5? Thanks!

LINUX For You: Hi Rajnish! In the recent past, we haven't really covered a lot on CentOS. A review, rather than a tutorial on CentOS 5.3, was carried in the August 2009 issue. Here's the link to that article, <http://bit.ly/M1KOtx>. But a tutorial would be a good idea as well! We will try and carry it in one of our forthcoming issues.

Love reading the articles on cyber attacks!

Uday Mittal:

I've been reading the series of articles on 'Cyber Attacks Explained'. I am really impressed with the content and the simple way in which the author, Prashant Phatak, explains the concepts. The latest part on 'Man in the Middle Attacks' was very informative and it even answered a question I was asked in an interview.

LINUX For You: The author has expressed his thanks by email. He says, "Great... Thanks! This helps me get the energy to write more in this wonderful magazine."
