

- **[action]:** This is the URL or action name in the request for which the log is generated.
- **[parameter]:** This is the parameter in the request for which the log is generated.
- **[value]:** This is the value of the parameter for which the log is generated.
- **[userLocalIP]:** This denotes the IP address of the user and if it's been modified through a proxy.
- **[IP]:** This is the IP from which the request is made.
- **[userID]:** This is the user ID that made the request.

Performance issues in HDIV

The performance of the system on which HDIV is installed mainly depends on the operational strategy chosen (cipher, hash or memory). The cipher strategy stores *state* at the client side, in the form of hidden parameters or URL parameters. Here, as the *state* is generated by properly ciphering, compressing and encoding it, higher CPU usage, higher bandwidth and more client-side memory usage is needed. On the other hand, the memory strategy stores *state* at the server side, so it requires more memory at the server end; however, it saves bandwidth and places a lower load on the CPU, compared to the cipher strategy. The hash strategy stores *state* value both at the client and server side—but the hash strategy is not often considered while implementing HDIV because of its inability to ensure confidentiality of data.

HDIV against CSRF attacks

How does HDIV respond against CSRF attacks? Its most useful feature against CSRF attacks is that it sends an anti-CSRF token (a long, random, non-repeatable string that changes with every request) to the client, which will be verified in the request. HDIV provides this anti-CSRF token in each form and link of the HTML response, ensuring that it will be sent back in the next request.

Applying any other Struts validator or any other framework validators can help in solving problems like SQL injection and XSS, but will not solve parameter tampering and CSRF attacks—in other words, they cannot assure integrity of data. Moreover, deploying and configuring validators is wasteful. HDIV provides a much more secure, effective and clean security framework, with an easy one-time installation and configuration.

Tell Me More About Advertising Opportunities in LFY Magazine

I am aware that LFY Magazine presents umpteen advertising opportunities. I too would like to explore the various options available for my organisation, so that I can help it grow its terms of sales and brand presence. My details are mentioned below:

Name _____
 Organisation _____
 Designation _____
 Address _____
 City _____ Pincode _____
 Phone _____ Fax _____
 E-mail _____

I would like to have a one-to-one meeting

- ☐ I would like to have a one-to-one meeting with someone from the LFY team.
☐ Please send me your marketing kit containing all necessary details.

Please mail/fax this form to:

EFY Enterprises Pvt Ltd

D-87/1, Okhla Industrial Area, Phase-1, New Delhi 110020
 Tel: 011-26810601/2/3; Fax: 011-26817563
 Email: efyenq@efyindia.com, Website: www.efyindia.com
