

DISCUSSION BOARD

Ganesh Madhukar Kamble:

I have a live CD of Ubuntu 11.10. It is not detecting any Internet connection. Please tell me how to configure Internet in it.

Like · comment

Saru Jeet Singh: What kind of connection do you use? Wired (eg BSNL Broadband) or Mobile Broadband (eg Reliance NetConnect, Photon Plus)? Or do you use your mobile to connect?

Ganesh Madhukar Kamble: It's a wired connection, our local internet provider.

Suhab Adhoni: Go to the terminal and type 'sudo pon dsl-provider' Your connection will be up!

Satir Satirski Satir: Follow this command 'Alt+F2 => type: nm-applet'

Nitish Pisal:

I have a couple of queries-

- 1) Can we install Linux through live CD or can we just boot and run it?
- 2) Does live CD require any VMware player like software?
- 3) How do I uninstall Linux on a dual boot system?

Please answer me ASAP.

Jd Daniel: Here are the answers to your queries numberwise-
1) Just pop it in and restart the computer
2) It does not.
3) Are you using a WUBI installer? If so, you can uninstall WUBI through the app manager on Windows (CTRL+R appwiz.cpl)

Josh Itham Felani Eduardo:

- 1) Yes, we can
- 2) No, just CD ROM
- 3) Insert the CD, if you have auto run, automatic wizard to uninstall will come.

Nitish Pisal: Thanks!

Krishna Puthran:

How do I set root password in Ubuntu? It doesn't ask for root password while installing. Can anybody help me out with this?

Like · comment

Anurag Rana: Root account is disabled by default in Ubuntu... Try running '# su passwd root'

Krishna Puthran: Thanks Anurag. I have one more clarification. So will it not prompt for root user password when I use the 'passwd' command?

Narendra Petkar: Instead of root, it gives sudo access for installing... try writing sudo before the installation command.

Anurag Rana: No, it will ask for the normal user password using which you are currently logged in.

Anish Dhill: Actually you have to enable root account which otherwise is unnecessary. Steps to follow- 1) sudo -i 2) sudo passwd root... and enjoy!... And to disable again... sudo passwd -d root'

Thulasi Padmanaban:

Why is Linux not famous among Indians?

Like · comment

Sourabh Malwe: It's not like that. But yes, one of the factors could be that Windows was the first system to be introduced to each and every person. It's more handy and has a good user interface as compared to Linux. But if we are talking from a tech's point of view, they rely on Linux.

Saurabh Wankhade: The current school syllabus needs to be revised with Linux. The ongoing syllabus has been made, keeping in mind the proprietary software. Linux is mainly introduced at the engineering level. And above all, many non Linux users think it is cmd line interface.

Saurabh Wankhade: Although the State government has taken some initiatives to promote FOSS.

Sourabh Malwe: Totally agree with you. The best way to start is to revise the school syllabus and remove the misconception of Linux as a cmd interface. Moreover its advantage must be introduced to the students over other platforms.

Thulasi Padmanaban: Yes Wankhade. The school children must be allowed to practice with the Linux system and should be taught the component of Linux instead of Windows.

Deekshith Allamaneni: I think that the Kerala government has advised schools to use Linux and named that program as IT@Schools. Also the Indian Government recently proposed the use of "BOSS Linux" (an Indian distro) in all government institutions. This is a great sign of the increasing usage of Linux in India.

Tell all your friends about the advantages of using Linux and help them when they have a problem while using it. Don't let them depend on you for any problem, instead refer to them all the useful forums for help. I told my friends about Linux and now over 10 people are using it in a class of 60.

Deekshith Allamaneni: Lack of awareness is responsible for holding Linux back. Educate people about this.

Anand Parshuramika:

What is the terminal command for mounting ISO image in Ubuntu 11.10? Please help.

Like · comment

Jd Daniel: sudo mount -o loop example.iso /media/example/ Or sudo mount -o rw, loop example.iso /media/example for write privileges

Anand Parshuramika: Thanks. Please give me the command for unmounting as well.

Kaushal Patel: umount /media/example
