

Postgres Plus Solution Pack

EnterpriseDB provides Postgres Plus Solution Pack, which provides high value, add on tools on PostgreSQL for Administrative Monitoring, Data Integration across multiple servers, Availability, Security, Performance and Software Maintenance.

Solution Pack Tools

Postgres Enterprise Manager (PEM)

The only solution that allows you to intelligently manage, monitor, and tune large numbers of Postgres database servers enterprise-wide from a single console.

SQL Protect

Protects your PostgreSQL and Advanced Server data against multiple SQL virus injection vectors by automatically learning safe data access patterns and collecting attack data.

PL/Secure for PL/PgSQL

Protects your server side database code and intellectual property from prying eyes for both internal and packaged applications without any special work on the part of the developer!

Migration Toolkit

Fast, flexible and customized database migration from Oracle, SQL Server, Sybase, and MySQL to PostgreSQL and Postgres Plus Advanced Server.

Updates Monitor

Eases your installation maintenance burden by notifying you when updates to any components are available and assists you in downloading and installing them.

SQL Profiler

A developer's friend to find, troubleshoot, and optimize slow running SQL fast! Provides on-demand or scheduled traces that can be sorted, filtered and saved by users and database.
