

GitHub open sources Janky

GitHub has open sourced Janky, its continuous integration (CI) server. Built on top of the Jenkins CI server, Janky is designed to work with projects hosted on GitHub. It is controlled by Hubot--the recently open sourced chat-room robot. Janky helps users of the CI system converse and be notified of issues via basic commands in a chat room. The developers plan to deploy its current version to the Heroku cloud application platform.

Governments should promote the use of FOSS, say experts

International IT experts have raised their voice, together urging governments worldwide to promote the use of open source software. They expressed their support for FOSS as a cost-effective, customisable and robust technology option at a convention in Thiruvananthapuram, Kerala.

The International Centre for Free and Open Source Software (ICFOSS), an autonomous institution of the government of Kerala, organised the 4th International FOSS Conference (FOSSK4) from December 27 to 29, 2011. The event was supported by the Software Freedom Law Centre (SFLC), Delhi; the IEEE Kerala Section and Trivandrum Chapter, and the Special Interest Group on FOSS (SIG-FOSS) of the Computer Society of India. The conference reviewed the growth and dissemination of FOSS in Kerala and across India over the past decade, the factors that encouraged or hindered its growth, and ways to propagate FOSS in all domains. The experts appealed to governments worldwide to include Free and Open Source Software (FOSS) in national and regional IT policies.

A press statement issued by the organisers said that the adoption of FOSS in all software domains, including government, industry, business, research and education, will be essential in the future.

The participants of the conference opined that FOSS has an eminent role in developing various solutions for the problems faced by mankind. The International Centre for FOSS said that free software could be used to develop adaptation strategies for climatic change as well.

OpenLogic's CloudSwing ties into the Rackspace Cloud

OpenLogic, Inc, the provider of enterprise open source solutions for the cloud and the data centre, recently announced that its cloud solution, CloudSwing, can now be deployed to the Rackspace Cloud. Thus, OpenLogic has entered into the Cloud Tools programme with Rackspace Hosting. Rackspace Cloud Tools is a showcase site for leading technologies, enabling diverse uses of the Rackspace Clouds.

OpenLogic CloudSwing is a fully flexible Platform-as-a-Service (PaaS) cloud solution, offering cost-tracking and complete customisation of technology stacks. CloudSwing users can also leverage OpenLogic's support of over 600 different open source packages.

The open source approach to malaria drug discovery

Open Source Drug Discovery (OSDD) for Malaria will be holding an open and global meeting in Sydney, Australia on February 24, 2012. The OSDD project for Malaria had been launched earlier this year by The Synaptic Leap (TSL), a non-profit

organisation for open source biomedical research. The project focuses on providing online tools to help researchers coordinate efforts and exchange knowledge, while project members can participate in online discussions, author blogs, and use aggregated RSS feeds to stay connected with news and research.

Malaria has been one of the most serious public health problems in the tropical and sub-tropical regions of the world. The meeting to address the health problem is open to all and will hopefully be live-streamed to a global audience.

A TV set that runs on Android 2.2

NetUP, a Russian company, has rolled out a new TV set that runs on Android 2.2. The device enables access to IPTV features, including surfing, social networking, gaming, YouTube, Skype, Google Maps and other similar applications without the aid of a regular set-top box.

The technical characteristics of the device include a 1 GHz Samsung S5PV210 CPU, 1 GB NAND flash memory, 512 MB DDR-2 RAM along with Wi-Fi, USB and GPS. According to the company, the Android-based TV set is targeted at hotels and residences.
