

TCP stack, and support for thin provisioning in the Device Mapper. The latest kernel version also has an array of improved drivers. It addresses graphics hardware from Intel and Nvidia, and wireless devices from Atheros and Broadcom.

Meet Qooq: a Linux-based culinary tablet

Now, here's a tablet that can literally give you some food for thought!

The Qooq tablet is specifically designed for the kitchen. The new Linux-based tablet device that is meant to help you in the kitchen comes with heat- and water-resistant protection, along with a kickstand on the back.

Powered by a Cortex A9 processor running at 1 GHz, the Qooq tablet sports a 25.6-cm (10.1-inch) display with a resolution of 1024x600. The device comes equipped with an SD card slot, Ethernet port, USB port and a headphone jack under a protective cover.

Qooq runs Linux, a version customised by Qooq for easy set-up and intuitive operation. The tablet offers digital cookbooks, and many more recipe and cooking-related apps and tools. It also introduces preparation steps, ingredient lists, and videos of the items being prepared by Qooq's commissioned chefs.

Users have the option to plan meals for an entire week and generate a shopping list on this device. Moreover, the culinary slate offers basic tablet functionality, such as a Flash-ready browser, MP3 player, built-in apps, music and video player, radio stations, Facebook, Twitter, a weather app and Web short-cuts.

Reportedly selling well in France, the Qooq tablet will be available in the United States soon, at a cost of around \$400.

A Carnatic music app for Android gains popularity

The Carnatic Music app developed by Sivakumar Loganathan, a graduate student in Entertainment Technology at the Carnegie Mellon University, and released in April 2011, has already seen 3090 downloads since its launch. The 'Carnatic Raga' app provides reference to about 968 ragas used in Carnatic music, and enables the search for a raga from a single note. The app is being downloaded worldwide from the Android Market, with maximum downloads from India (45 per cent), followed by the US (30 per cent).

The world's first Android 4.0 smart TV

Lenovo has unveiled the world's first Android 4.0 smart TV at CES 2012. What is interesting is that Lenovo's K9 runs on Android 4.0, not Google TV. The company claims that it has wrapped a new 'smart UI' around Android 4.0 in the K9.

With this new offering, the company aims to bring features like video-

FSFE opens nominations for the 2012 Document Freedom Award

The Free Software Foundation Europe (FSFE), a non-profit organisation, is seeking nominations for its fourth annual Document Freedom Award. Each year, the FSFE presents the award to an institution or company that makes a contribution to expanding open standards. The Document Freedom Award is granted each year during the Document Freedom Day, the international day to celebrate the importance of Open Standards. This year, the Foundation will assign the Document Freedom Award on March 28, 2012.

The new *ET* app offers access to cutting-edge business news and market analysis, with the best browsing experience. Designed with simple navigation and a neat, clutter-free layout, the app offers live coverage of business news and markets.

Linux 3.3 to have more than 15 million lines of code

Following the merger of the first changes into Linux 3.3, the number of lines of kernel source code has crossed the 15-million mark. The milestone includes the comments, blank lines, documentation, scripts and user-land tools included with the kernel. According to kernel developer Greg Kroah-Hartman, Linux 3.0, which had been designated as a stable kernel, will be promoted to long-term kernel status, and supported for at least two years. The developers typically only support the current kernel until a short time after the release of its successor.
