

The Top 10

Android Phones of 2011

Android is the new king of the Indian smartphone market. It surpassed Symbian's popularity and has captured a major share of the market, so much so that Android devices have become a real threat to other smartphone makers. People like Android because of several reasons, including app integration, the ability to control the phone from a computer, custom ROMs, Flash support, wireless app installation, alternate keyboards, widgets and automation.

India witnessed the launch of 100 Android-based handsets this year. We present a list of the 10 best Android smartphones that made it to the market in 2011.

1. Samsung Galaxy S II

The Samsung Galaxy S II contributed the most to Samsung becoming the No 1 smartphone seller in India. The Galaxy S II did wonders for the company across the globe too. The device was named the best smartphone by the US-based Consumer Reports magazine. The Galaxy S II has a 10.9 cm (4.3 inch) SUPER AMOLED touch-screen and is powered by a 1.2 GHz dual-core A9 processor. The phone runs on the Android 2.3 Gingerbread OS, and will soon get an update to Android 4.0 Ice Cream Sandwich OS. The phone also has Samsung's TouchWiz user interface, which makes it smooth and easy to use. The smartphone comes equipped with an 8 MP camera with auto-focus and an LED flash, enabling users to capture HD images. Users also get access to pre-installed Swype, which is an alternative keyboard that makes composing text easy and quick.
