

Saurabh Galav, founder and Red Hat trainer, Linux Scrappers

Sajith A, CEO, ZFrame Technologies

Sumit Gandhi, software developer, Greycalls18 Media

Varad Gupta, CTO, Keen & Able Computers

how employers perceive candidates in his area of work. "I am more into the Linux systems level—embedded Linux and device drivers. Certification is beneficial to those who want to get into systems administration or networking, especially freshers. But if you are into the core internals of Linux, it has more to do with kernel space, writing drivers etc, and a certification will not help you in this area," Pugaliga claims.

Some respondents recommend the following generic courses:

- An introduction to a Linux OS, such as Red Hat or Fedora, which is widely accepted.
- Linux system administration
- Web application development on Linux platforms (Java, AJAX and Android)
- OS virtualisation
- Designing applications for cloud deployment and computing
- Kernel programming

like India Bulls, IBM, Idea and Airtel: "I have been looking for a job in Linux server administration, and the first question interviewers ask me is if I hold a certification. Later, they ask questions to test me on shell scripts and networking concepts. I am a fresher, and so the RHCE certification did teach me a lot."

On the other hand, freelance Linux trainer, Anil Kumar Pugaliga, feels that a certification does not make a difference to

Yes, no, maybe?

Viewed with a broader perspective, our verdict is that certifications are the safe way to go if you are a fresher. They can increase your employability, but make sure you know the subject well, as employers are more interested in what a candidate can do, rather than what tests he has passed. For the experienced ones, certification is a great way to go deeper into a subject and specialise in your area of interest. Service and support providers can use the number of certified personnel in their ranks as a marketing tool to show their prowess.

In the end, certifications may help you gain confidence with respect to your knowledge, but you will still need to prove yourself in the corporate world.
