

YOU SAID IT

Android calling...

It feels good to have my favourite magazine, *LINUX For You*, online as an eZine. But in addition to this, it would be great if I could read the magazine on-the-go, on my Android phone. Please provide some app for this or could you make this magazine available in the ePub format to enable easy reading?

—Anuj, anuj01@gmail.com

ED: Thanks for the feedback. We have an Android app for LFY but it's available through a third party, as of now. Hence, we are currently unable to provide free access to our existing subscribers. But we are working on developing our own apps to overcome this challenge, and hopefully this year, we should be able to offer this facility too.

Lisp rocks!

I want to congratulate you for including the Lisp series of articles in your magazine. Lisp is really cool! I have been living in the US for the past 20 years and have worked closely with the academic community. Most of the research projects I have been involved with use Lisp.

It is heartening to see Lisp being used in commercial applications, such as the Siri app developed for the iPhone 4S.

Only a magazine like *LFY* could have covered Lisp to such an extent. The articles are wonderful. I have read a few and have already arranged to get earlier copies of *LFY* to read the rest of the articles.

Please continue with the good work!

—Vishnu,
vishnu.aiyar@gmail.com

ED: It was a pleasure to go through your note! Your praise does motivate us to keep doing better :-)

We are glad to know about your deep interest in Lisp and that you enjoy the ongoing Lisp series. We will surely convey your appreciation to Vivek Shangari, the author of the series! Keep sharing your feedback with us in the future too.

Django please!

I have a request to make. I would really appreciate it if you could carry articles on Django in your magazine.

—Renjith Thankachan,
via <http://www.facebook.com/LinuxForYou>

ED: Thanks for the suggestion. We will convey your request to our editorial team and try to include articles on Django in one of our forthcoming issues. Till then, you could go through some of the related articles published by us earlier. Here are the links to some of them:

A wish list for LFY

I have just become a subscriber of *LFY* magazine. I would like to request that you carry articles on the following topics of my choice:

- Zend Frameworks: What it can do, its configuration and development with PHP
- Joomla: A step-by-step guide using Ajax
- Cake PHP
- Website development with the above tools and taking full

advantage of open source software

I would be very grateful if you could cover these topics in detail, preferably over a series rather than a single article.

—Vishal Manwatkar,
vsmawatkar@gmail.com

ED: We appreciate you sharing the list of topics that you would like to see in *LFY*! We always look forward to such ideas from readers like you. Your wish list will be forwarded to our editorial team and we will try our best to include the topics you mentioned in our forthcoming issues :-)

And some suggestions...

I have been reading *LFY* for the last two years. So let me first thank you for the tremendous knowledge that I have gained through *LFY*!

I also have a small suggestion regarding some of the articles which are appearing as part of a series on Lisp and Blender. My observation is that in the initial stages, the articles were very interesting. However, the old spark seems to have gone missing now. I tend to avoid even looking at these pages.

Personally, I expect articles related to Linux (as an OS). I agree that the Lisp and Blender articles are also fairly technical, but the magazine is becoming more like a reference book on these topics.

On the other hand, *The Voyage to the Kernel* series was very interesting as it was directly related to an OS.

So I would request you to include more articles on the newly introduced programming languages (instead of only Lisp) in the forthcoming issues. After reading an abstract introduction of the
