Jotish Marri:

Can any one get me the link for LAMP installation?

Like · comment

Phani Kumar Veluturi: "apt-get install lamp-server^
-y ", just copy paste this command and follow the
onscreen instructions.

Uday Mittal: If you're using Ubuntu check out this link:
<https://help.ubuntu.com/community/Taskel>.

Svanius Mestiel:

I installed Ubuntu just a few minutes back. I need
some advice on how I can modify the desktop or
change the theme. I also want to know how to transfer
from the Windows 7 Outlook profile and emails.

Aboobacker Mk: You can install screenlets, docks and
conky for tweaking your desktop. Install gnome-
tweak-tool for change icons and themes. Try out
other DE's like kde lxde ,gnome-shell etc. If any
doubt occurs comment here,we will help you :)

Svanius Mestiel: Thank you very much!

Shubham Gupta:

When I try to install the Linux OS, i.e Fedora 16,
then my Hard Disk is not detected. I am using HP
Probook 4430S. Please help me regarding this.

Nirvik Nepali Khanal: In the partition table you have to
manage....and for the partition mode you have to
select ext4.

Phani Kumar Veluturi: Check bios, you should set the
sata change to "ata" mode ide operation.

Aniruddha P Tekade:

I have a 3.5G Connect iBall modem and want to connect
it on Ubuntu 11.10. Whats the procedure if its not being
detected on 11.10, whereas it works successfully on the
previous versions of Ubuntu. Help me out please.

Aboobacker Mk: Connect the modem and lsusb in
terminal,post the output below :)

Phani Kumar Veluturi: This link would help, <http://www.linuxnix.com/2011/08/connect-reliance-netconnect-ubuntu.html>, this is same for all modems.

Ankit Mishra:

My root partition is full. What do I do now?

Like · comment

Aboobacker Mk: Delete unwanted data ,or you can
use gparted to expand your partition.

Ritesh Chaudhari: You can type the following com-
mand to free the space which are occupied by the
old source packages:

"sudo apt-get auto remove"(which Remove
automatically all unused packages),"sudo apt-
get autoclean"(Erase old downloaded archive
files)... and you can also use gparted/disk
utility to extend space.

Aboobacker Mk: Use these commands,
sudo apt-get clean
for removing deb cache

sudo apt-get install fslint

... for installing fslint which can remove duplicate
files.

Open the disk usage analyser to analyse the file
list and remove unwanted files .

If you still need more free space, use gparted.
(Note: Be careful while using gparted).

Davin Singh Alexandre:

Hello. I would like to apologise in advance for
my ignorance, but I seem to have a problem
finding Linux. I was trying to boot my laptop,
but it said I had no operating system, so I
decided to install Linux, but I can't seem to
find where to download it. I also want to know,
if I download it on to my USB, it will be able to
open on my operating system-less laptop?

Like · comment

Mahesh Patil: You can try out dam small Linux.
Also Google it for the USB versions of Linux,
there are many with full graphix support, boot
from usb drive.

Davin Singh Alexandre: Alright. Thank you!
