

Check out the new Ubuntu Business Desktop Remix

Canonical has released the latest version of the Ubuntu Business Desktop Remix, based on Ubuntu 12.04 LTS. According to the company, it comes with all the goodness of an Ubuntu Long-Term Support (LTS) release and is compatible with all Ubuntu certified hardware, apps and tools. The Remix does not include any modified or enhanced packages; it gets its security updates from the same place as standard Ubuntu.

“Designed for corporate and government organisations evaluating Ubuntu for their desktop infrastructure, the Business Desktop Remix is a simple base image that can be deployed in your corporate environment or used as a starting point for further customisation,” a Canonical blog post reports.

In order to save time in deployment, the company has removed games, social networking programs, file sharing apps and technical tools. Instead, you'll find software more appropriate for a corporate environment; these include VMware View, the Adobe Flash plug-in and the OpenJDK 6 Java runtime environment.

First Android-powered Walkman from Sony

Sony's Walkman range of portable audio devices, the Z series, now run Android 2.3. However, Sony is not the first brand to add Google's operating system to its music devices. Samsung and Philips have already done this with their systems.

The Android-powered Walkman, the NWZ-Z1050, was announced at the Consumer Electronics Show in Singapore earlier this year. A quick look at the specs reveals that it comes with a dual-core Nvidia Tegra 2 processor, a 10.92 cm (4.3 inch) WVGA (800 x 480 pixels) touchscreen and an S-Master MX digital amplifier.

The device comes with 16 GB of storage and will be sold at \$429 in Singapore. As of now there is no comparable Apple device, but a 32 GB iPod Touch is almost a dollar cheaper than the Sony Walkman.

Firefox 14 Beta for Android now available

Mozilla has come up with a beta of Firefox 14 for Android, which offers a redesigned look that “...blends in with the Android user interface, performance enhancements and support for third-party plug-ins like Flash, for a better mobile browsing experience.” Besides Firefox Sync, add-ons and tabbed browsing, the new Firefox for Android Beta includes what the organisation calls an ‘awesome screen’, and enhanced start-up and response times, improved graphics performance as well as panning and zooming.

VLC reaches over a billion downloads

According to the VideoLAN Organization, VLC media player has been

downloaded more than one billion times since February 2005. For the uninitiated, VLC is a free and open source cross-platform multimedia player and framework that plays most multimedia files as well as DVDs, audio CDs, VCDs and various streaming protocols.

Google Chrome 19 ready for download

Google recently announced the release of Google Chrome 19. Version

19.0.1084.46 will reportedly fix 20 security vulnerabilities in the browser, of which eight are high-severity flaws, seven medium-severity flaws, and five low-severity flaws.

Users can update their systems with the latest version by using the software's built-in silent updater. Alternatively, you can download the latest version of Chrome directly from google.com/chrome. Google has so far got over 780 qualifying vulnerability reports that span the hundreds of Google-developed services, along with the software written by 50 or so firms that it has acquired.
