

Figure 6: Attributes dialogue

Figure 7: Sample map

4. Click the *Add to Attribute List* button.
5. Click *OK*.
6. Save the layer as *new_airports.shp*.
7. Right-click *New Airports* in the *Layers* window.
8. Select *Toggle Editing* on the pop-up. Now you are ready to plot new points.
9. Go to *Edit > Capture Point*. Click on those places in the map where you want to plot new airports. In the *Attributes* pop-up (Figure 6), type in the desired values, and hit *OK*.

You will see the new point on the map canvas.

For plotting roads, rivers and mountain ranges, you could choose line as the geometry, while polygon geometry is chosen for closed entities like lakes, parks, parcels of land, etc.

Map publishing

A map ready for publishing should contain the following details: the title, legend, data source, date, projection information, distribution licence, scale, north arrow and information about the creator. Let us now publish a map with the regions, major rivers, and trees layers. The map composer in QGIS provides a canvas to structure the map and add these data fields.

- Click *File > New Print Composer*.
- Use the *General* tab on the right to modify parameters like the size of the paper, orientation, the quality and the grid style.
- To add a map to the composer, click *Layout > Add Map* and then draw the canvas in the white area of the screen. The layout will display the layers as seen in the map canvas of the QGIS.
- Click the *Move item content* icon to pan across the map.
- To add a label, click *Layout > Add a label*. Click on the map canvas where you want to place the label. Use the *Item* tab on the right to style the text.

Elements like the title, publisher's name, data source and the date of publishing can be added as labels.

Other elements like the legend, north arrow and scale-bar can be added using the controls in the menu. These can be styled using the fields on the *Item* tab.

Exporting the map

Click *File > Export as image* to export the map as an image. The map can also be exported as a PDF or an SVG file. 

By: Sagar Arlekar & Niket Narang

The authors are researchers at the Center for Study of Science, Technology and Policy (CSTEP), Bengaluru. They work in the fields of GIS and Agent-Based Simulation. At CSTEP they have built a web-based GIS framework to simulate and visualise disaster impact. They love working with open source tools and are active contributors to Openstreetmaps.
