

Oracle India Pvt Ltd | Gurgaon

Oracle offers the industry's most complete and integrated virtualisation, from the desktop to the data centre. Going far beyond simple consolidation, the company enables customers to virtualise and manage their full hardware and software stack. Oracle recently announced Oracle VM 3.0, the latest release of its server virtualisation and management solution.

Clients: The Agency of the Republic of Slovenia for Agricultural Markets and Rural Development (ARSKTRP), CERN, the European Organization for Nuclear Research, Aspicon GmbH, John Hopkins University, etc.

Support model for clients: Oracle Premier Support provides essential support services including 24/7 technical assistance, powerful proactive support resources and product updates. Oracle Advanced Customer Support Services provides mission critical support services for complex IT environments that help maximise performance, achieve high availability and reduce risks across the complete Oracle stack.

USP: Oracle's industry solutions include best-in-class products that address complex business processes relevant to a wide range of industries including communications, healthcare, financial services, automotive, education and research.

Training: Virtualisation training from Oracle University imparts the necessary skills to reduce IT infrastructure costs and improve service levels by effectively implementing Oracle's virtualisation technologies. The company's comprehensive training covers everything from server and storage virtualisation to complete desktop virtualisation.

Special mention: Oracle won the 2011 GOOD DESIGN Award for its Sun Ray 3 Series Clients -- which are simple, eco-friendly, low-cost devices ideal for displaying server-hosted virtual desktops and applications.

Taashee Linux Services | Hyderabad

Taashee as a company implements two of the most popular and leading virtualisation technologies in the market. One is the VMware vSphere product family and the second is Red Hat Enterprise Virtualization (RHEV), which is an open source X 86 virtualisation technology based on KVM (Kernel-based Virtual Machine). The firm provides both desktop virtualisation and server virtualisation solutions. It has worked on various hybrid scenarios, wherein more than one virtualisation technology is used to meet customers' requirements. The company strongly believes that every technology has its own set of customers because of its unique features and price band. It provides high-end technology solutions to mid- and large-scale businesses.

Clients: Uttam Energies (Taashee is the world's first company to do the RHEV 3.0 beta implementation for this customer, and Red Hat even highlighted this case study during the launch of RHEV 3.0), iCreate Software, Tata Consultancy Services, etc.

Support model for clients: Customers can take subscriptions from the principle companies and, hence, an end customer needs to pay only for the support, which is very cost-effective. Also, in most cases, Taashee's implementation fee includes 1 to 3 months of support; after that, it's the customers' call if they want to take the support as an AMC or not.

USP: It is a boutique tech company with expertise in the field of enterprise open source software (Red Hat, EnterpriseDB, Ubuntu), virtualisation (RHEV, KVM, Xen and VMware), middleware (JBoss, Tomcat, tcServer, Apache and Gemfire) and cloud platforms (Amazon EC2, CloudForms, OpenShift and vCloud).

Training: Taashee provides high-end on-premise training on Red Hat Virtualisation and VMware virtualisation. Its training is unique in nature, because it covers a lot of troubleshooting scenarios that the firm has mastered after the large sized deployments on the production servers for its customers.

Special mention: The firm has been rated as the 'No 1 Partner in India' by Red Hat in 2011 and also the 'Most Committed Partner in APAC' in 2010. It has been ranked among the 'Channel World Top 100 Channel Partners' in 2011 and 2012.
