

support for the Linux community, is welcome news. Teresa Wu, manager, Google Docs Community, said, "We're working on Linux support, to be called 'Hang Tight'." But when this is to happen, hasn't been made public yet.

The support will let the Linux users of Google Drive automatically synchronise their files with the cloud service, just as Windows and OSX users currently do. The support will make the user experience more friendly and appealing, similar to Linux-friendly Ubuntu One, which also offers 5 GB of free storage and would be soon updated with Ubuntu 12.04 'Precise Pangolin'.

After shutting down 'Picasa for Linux', Google Drive's launch sans Linux support added to the dismay. But the arrival of 'Hang Tight' can definitely heal the burns of the Linux community.

Beta version of Opera 12 launched

Opera Software just released the beta version of Opera 12, codenamed Wahoo, the latest entry in Opera's long line of desktop Web browsers. Opera 12 is both smarter and faster than its predecessors and introduces new features for both developers and consumers to play with, ahead of the final launch. Discover Opera 12 for yourself at <http://www.opera.com/browser/next>.

Opera 12 also shows off some of the new tricks available to Web developers by supporting getUserMedia, an API that allows Web applications to use hardware like your computer's built-in web cam.

DropBox offers auto-upload via DropBox 1.40

DropBox, that recently made cloud storage popular everywhere by offering free storage and interesting offers, has moved on to the next step. The company has released DropBox 1.40 for Windows, Mac and Linux. This new update basically extends the photo and video uploading tools that were pioneered by DropBox for Android, along with allowing batch uploading and downloading of files.

These new features were previously available to only those running DropBox Experimental Edition. The new release offers 2 GB free storage space to its users via a dedicated folder on their desktop. This new system can also automatically detect your camera, once it is connected to your laptop or PC and will start downloading all files before uploading them to your DropBox account with a few clicks.

However, one has to be careful about the storage size, since the service uploads photos and videos of any size, without resizing them. But DropBox has an added advantage here too: it offers to increase a user's free storage by 500 MB as a reward for using the auto-upload feature for the first time. Henceforth, every time you upload an additional 500 MB of photos or videos using the auto-upload feature, you'll gain another 500 MB of free space, up to a maximum of 3 GB of extra space on top of the 2 GB already provided.

Dropbox

SHI International selects SUSE Linux Enterprise

SUSE and SHI International Corp recently announced SHI Cloud, a next-generation infrastructure-as-a-service offering designed for IT organisations. IT organisations of all sizes will have the ability to run SUSE Linux Enterprise Server on SHI Cloud, paying only for the hours they use. SUSE Linux Enterprise Server will be available across SHI Cloud's secure, high-performance and industrial-grade Managed Private, Private and Multi-Tenant cloud offerings. In addition, customers will have access to SUSE's most current security patches, bug fixes and new features so they can keep their SUSE Linux Enterprise Server VMs running on SHI Cloud's innovative vCore platform up to date.

The combination of the flexible, pay-as-you-go SHI Cloud offerings and SUSE Linux Enterprise Server helps customers easily adapt their existing IT infrastructure solutions for use in the cloud. SUSE Linux Enterprise Server delivers the proven reliability, interoperability and performance customers need in order to confidently run mission-critical workloads in a cloud environment. And with over 9,200 application certifications, it has the broadest independent software vendor (ISV) support among enterprise Linux operating systems, ensuring application compatibility from the data centre to the cloud.
