

to access and run applications such as voice-to-text, calling and music, all without touching their phone.

Sensory Inc, a developer of speech recognition, voice activation, speaker verification and identification software and semiconductors, developed the TrulyHandsfree technology to be the first always-on, always listening voice control trigger that works. The technology is robust enough to work in noisy environments, has a low risk of false fires (it won't make a call when you don't want it to) and has minimal impact on battery life, making it the ideal voice activation solution for mobile devices.

ePravesh heralds a new phase for the Indian education sector

ePravesh, a product of Splashgain Technologies, a leading online platform for admissions, has launched a first-of-its-kind Android application to streamline pre-admission formalities for institutes and students alike. The

ePravesh application, which is available on all Android enabled phones, provides students with all the relevant information including brochures, course details, access to the respective school or college website, to those who have registered with ePravesh, completely free of cost.

ePravesh has many built-in functionalities, and various levels of services include selecting institutes, applications for admission, forms and documents submission, followed by the relevant communication. With a rising number of students seeking admissions across universities in India, it has become imperative for technology intervention to make the process easier, effective and more structured. ePravesh aims to be a single point of information on schools, colleges and other educational institutes and, hence, will save users the trouble of visiting the school or college website repeatedly.

While it is a boon for students, this product is also an effective medium for institutes to reach out to prospective students. The *Updates* facility of the application will help the institutes keep registered students, parents or working professionals posted on the latest happenings in the institute, apart from providing them information about new courses, new divisions launched, awards and achievements, and the seminars or conferences taking place. This would save the institutes the marketing and administrative expenses they incur when promoting events.

Datawind announces multi-language support for the UbiSlate series of tablets

Users of UbiSlate tablets will be able to use it in English, Hindi, Marathi, Tamil, Punjabi and various other Indian and foreign languages. Datawind has entered into a strategic alliance with Reverie Language Technologies Pvt Ltd of Bengaluru to ensure that the UbiSlate series of tablets will offer a good end user experience in all major local languages of India and the world.

Announcing the alliance, Suneet Singh Tuli, CEO of Datawind, said, "We are very happy to have formed this strategic partnership with Reverie for the supply of language solutions. We feel strongly that technology should reach every corner of the world and knowledge of English should not be a barrier. This language solution will benefit users by offering a new world of services and products to a segment of the world's population that has been ignored for so long."

An operating system level of integration will ensure that the complete user experience will be in the customers' language of choice. UbiSlate tablets will have text-rendering technology capable of displaying all languages, including complex scripts and keypads for all supported languages and transliteration technology.
