

CREATE A SLIDE SHOW WITH SLIDIFIER

Slidifier is a browser-based, open source slide show creator that is quick and very easy to use. Let's take a look.

Many presenters at conferences these days use browser-based slide shows. This is more prevalent in the open source community. Browser-based slide presentations have several advantages over the application-based presentations. One of the biggest advantages is the viewer (Web browser) that has been omnipresent in every computer since the last decade. With the standardisation of HTML and the powerful features of HTML 5, this trend is going to only increase in the coming years.

In this article, we will not only familiarise ourselves with

the installation and features of Slidifier, but also learn how to extend its functionality. After all, that is why we all love open source software.

An overview of Slidifier

Slidifier is simple and easy-to-use open source LAMP-based software developed by Holger Ludvigsen and Espen H Halvorsen. The software allows you to not only create presentations, but also host them on a common server for many others to access using a Web browser. What a wiki
