

GRAPHS USING OPEN FLASH CHARTS

Part—4

Till now, we have explored how to draw great-looking dynamic line charts, pie charts and bar charts using the Open Flash Charts library. In this last article of the series, let us look at how to create dynamic radar charts, which can be used to show comparative data for more than two entities.

Before drawing the radar chart, let us first decide on the data we will plot. Let us look at a classroom scenario once again, comparing three students' performance in different subjects (their marks are shown in the table given below).

Code

Assuming that the corresponding table is created in our MySQL database, we now proceed with the data file (download it from http://www.linuxforu.com/article_source_code/june12/open_flash_source_code.zip), which fetches the chart data (using an SQL query) and passes it to OFC for rendering:

```
<?php
include_once 'php-ofc-library/open-flash-chart.php';
// also include the sugar (helper functions)
include 'php-ofc-library/ofc_sugar.php';
$die = false;
$link = @mysql_connect('localhost','test_user','test_pwd') or
($die = true);
if($die)
{
    echo '<h3>Database connection error!!!</h3>';
    echo 'A connection to the database could not be
    established.<br />';
    echo 'Please check your username, password, database name and
    host.<br />';
    echo 'Also make sure <i>mysql.class.php</i> is rightly
```

```
configured!<br /><br />';
}
mysql_select_db('test_database');
```

```
$query = mysql_query('SELECT DISTINCT Student_Name, Physics,
Maths, Chemistry, English, Economics, History FROM test_
radarchart');
while($queryRow = mysql_fetch_array($query, MYSQL_ASSOC))
{
```

```
    $labels[] = $queryRow['Student_Name'];
    $data_1[] = intval($queryRow['Physics']);
    $data_2[] = intval($queryRow['Maths']);
    $data_3[] = intval($queryRow['Chemistry']);
    $data_4[] = intval($queryRow['English']);
    $data_5[] = intval($queryRow['Economics']);
    $data_6[] = intval($queryRow['History']);
}
```

```
$line_1 = new line();
$line_1->set_values(array($data_1[0], $data_2[0], $data_3[0],
$data_4[0], $data_5[0], $data_6[0]));
$line_1->set_default_dot_style( new s_hollow_dot('#FB8229', 4) );
$line_1->set_width( 1 );
$line_1->set_colour( '#FB8229' );
$line_1->set_tooltip( "Gold<br>=A1a" );
$line_1->set_key( $labels[0], 10 );

$line_2 = new line();
```

Student's name	Physics	Mathematics	Chemistry	English	Economics	History
Ashish	45	50	68	85	87	78
Rahul	50	60	87	75	67	56
Nikhil	85	73	60	57	55	59
