

your own custom audio track if you wish—but align it properly with the video portion in the time-line. You can see that in Figure 4, I have split the audio and video components of the original clip.

Merging two videos

If you want to merge two different videos seamlessly, first drag the two videos onto the time-line, but in different video tracks—so that one clip is above the other. Then bring the starting part of the second clip (the order doesn't matter much) below the ending part of the first clip (refer to Figure 5). Now, when you click the junction where the two clips meet, you will see a blinking green dot. Click it to add a *Transition* effect (which you can choose from the *Transition* pane). You have just merged your two clips!

Adding a title clip

Often, at the starting, middle or ending of a clip, you may want to add some graphics or text. To do that, go to *Project > Add Title Clip*. This will open up an image editor with many different features you can explore. If you want a specific background, enable the *Show Background* option at the bottom (see Figure 6). Now, once you click *OK*, your title clip will be saved in the project tree, from where you can import it to the desired point in the time-line.

Rendering a project

Finally, when you are done editing, you need to render the project to generate an output video/audio file. Go to *Project > Render* to start this process. You can choose the output format, and you will need to wait for some time for the rendering to finish.

Troubleshooting

When I started Kdenlive on Ubuntu for the first time, I got an error message about an MLT SDL module not being found. The solution to this problem is to run the following code in the terminal:

```
sudo add-apt-repository ppa:sunab/kdenlive-release
sudo apt-get update
sudo apt-get upgrade
sudo apt-get dist-upgrade
```

Also, to get support for other restricted codecs in Kdenlive on Ubuntu, run the following command in the terminal:

```
sudo apt-get install ubuntu-restricted-extras
```

source technologies by making video tutorials on this link: <http://spoken-tutorial.org/>. This is an initiative led by Prof Kannan Moudgalya at IIT Bombay. The aim of this project is to propagate the use of open source technologies in our education system by making video tutorials which anyone in the nation can view for free. So, please do spare some time and, if possible, contribute to this project. **END** 🐧

Acknowledgements

I would really like to thank my brother Nayshil for pushing me to learn video editing, despite knowing that I didn't like it that much. I would also like to thank Prof Kannan Moudgalya from IIT Bombay for giving me some expert tips on how to make awesome video tutorials.
