Sanskrit		18	
Santhali			
Sindhi		1	
Tamil	393	88	126
Telugu	284	38	47
Urdu		19	6

households, 9.5 per cent have computers, which amounts to 23.37 million people. The census also shows that 53.32 per cent of households have mobile phones, which means 131 million people. As smartphone prices reduce, we can expect households to migrate to tablets or smartphones with touchscreen interfaces. This will lead to a tremendous use of computing devices in India in the near future, as Indic language users will be able to comfortably get over the English language barrier that is associated with text-based input methods.

Now that you know more about where Indian language localisation stands, you can help by delving into the details of your preferred language(s), and contributing to promote and popularise Indian language computing. I look forward to your questions/feedback.
