

MontaVista | Bengaluru

MontaVista offers several virtualisation solutions, including KVM Hypervisor (full virtualisation), Linux Containers (OS resource virtualisation) and MontaVista Bare Metal Engine (OS resource virtualisation and SoC hardware optimisation).

Clients: Cisco, Seagate, NEC, ALU, Alcatel, etc.

Support model for clients: Virtualisation is extensively supported on its flagship OS known as Carrier Grade Linux 6.0 (CGE6.0). The firm has a dedicated support team in place for customers to log bugs, respond to requests for enhancements, to help in walking them through setting up virtualisation techniques on their target systems, etc. A lot of assistance is offered via the support portal, support.mvista.com.

USP: MontaVista is a pioneer in the Bare Metal Engine (BME) virtualisation technique done on its home grown Oteon microprocessor family. This has been used by Cisco in several of its network routers, switches, etc.

Training: The company gives extensive training related to virtualisation for its product line. It also conducts customised webinars hosted by its Chief Architect, Corey Minyard, on how to effectively exploit the virtualisation technology.

Special mention: The company's virtualisation solutions are certified by Linux Standard Base (LSB) 3.0, Carrier Grade Linux specification (CGL 5.0) and SCOPE Alliance Linux Profile 1.1. An impressive level of six nines (99.9999%) in reliability (a downtime of less than 31.5 sec/year) has also been proven by the company.

Netweb Technologies | New Delhi

Netweb Technologies provides server and desktop virtualisation to its customers. It is also active in the storage solutions and HPC space, and maintains around 5000 servers a year.

Support model for clients: The firm operates in six cities across India and has a direct service and sales channel to the end customers.

USP: Customising the server to fit all kinds of customer requirements.

Special mention: The company has been awarded by Intel for earning the highest server revenue in the entire South East Asia region, for the last three years, consecutively.

Novell India Pvt Ltd | Bengaluru

Novell offers a wide range of best-in-breed and robust virtualisation solutions. Some of its key virtualisation solutions include the integrated Xen-based virtualisation solutions built on the capabilities of the SUSE Linux Enterprise Server, Kernel Virtual Machine (KVM), Linux Containers, Hyper-V as well as Windows guest support for KVM. Also, new paravirtualised drivers for Windows 7 SP1 and Windows Server 2008 R2 guests are available with the latest SUSE Linux Enterprise Virtual Machine Driver Pack and the Novell ZENworks Application Virtualization solution. SUSE also recently announced the launch of SUSE Linux Enterprise 11 Service Pack 2 (SP2).

Clients: The BMW Group, Sesame Workshop (a not-for-profit educational organisation based in the USA), Casio, Onslow College, the Bombay Stock Exchange, NSDL, ITC, etc, are using Novell's Xen virtualisation technology.

Support model for clients: Novell has strong and certified support teams to help its partners and customers resolve their most critical issues. Some key support systems which Novell provides include Novell Premium Service Engineer, Long Term Service Pack Support, Novell Additional Support options and Novell Linux Support. The company also has access to SUSE's award winning unlimited call centre support.

USP: Novell integrated the Xen hypervisor as a core function of its SUSE Linux Enterprise platform, making Novell the first major commercial vendor to bring an enterprise-ready Linux virtualisation solution to market. It provides a high performance at a lower cost. New levels of flexibility and agility can be created in the data centre at a lower total cost of ownership, which makes it a viable alternative to proprietary virtualisation solutions. It can also support a number of virtual machines for up to 32 sockets.

Training: Novell provides various certification and training programs for virtualisation at both basic as well as advanced levels.
