

DISCUSSION BOARD

Omkar Adhali:

Hey I want to start learning Linux. Please suggest a good book that I could start with.

Like · comment

Tanmay Barve: Red Hat or Solaris? For Redhat, use Fedora and Red Hat Enterprise Linux bible.

Joes Sandungo: Solaris is UNIX not Linux. RHEL bible is a great book. CentOS would be the best approach to learn enterprise Linux since is RedHat without the branding.

Omkar Adhali: Thanks Joes and Tanmay!

Rakesh Jain:

How do we install Tally ERP 9 on Linux?

Like · comment

Shabbir Stayn Koli: I think its a Windows application, you need to install 'wine' on your Linux first.

Rakesh Jain: Does wine support this such a heavy software like Tally?

Shabbir Stayn Koli: It does support heavy games and other Windows softwares. Give it a try!

Karthick Kesavan:

I am planning to do a RHCE. Please suggest some reference materials that I could use.

Like · comment

Elangovan Arumugam: Red Hat's official material is the best. You can get it from any training centre or even purchase it online. You don't need to go for any other materials.

Karthick Kesavan: Thank you Elangovan for your timely help.

Mahesh Patil: I would also highly recommend the RHCE exam practice course of 3 days' duration.

A.K. Srivastava:

How do we install Ubuntu?

Like · comment

Harshdeep Sekhey: Boot the os from the disk and follow the instructions. It's easy!

A.K. Srivastava: Thanks!

Jatin Bhardwaj:

Is it possible to take the virtual connection (or remote desktop) of Windows from Red Hat Linux?

Like · comment

Elangovan Arumugam: Yes, it's possible. First install "rdesktop" rpm package. Then use the command "rdesktop -i ip address of windows pc>". But prior to that, do ensure that your Windows PC remote desktop connection is enabled...

Jatin Bhardwaj: Thanks a lot! I don't how to work with the USB drive in Red Hat. I have tried the same commands for CD/DVD mounting but to no benefits.

Elangovan Arumugam: What's the filesystem format of your USB drive? If it is NTFS, it means you can't. You need a third party software.

Jatin Bhardwaj: Which software sir? I think we have to format the USB in vfat to use in Red Hat first.

Elangovan Arumugam: Yes. Red Hat has the default access to vfat and fat. But you can use NTFS also. You would be needing additional package, so that you can access the NTFS partition of Windows as well.

Jatin Bhardwaj: What kind of software is required?

Elangovan Arumugam: Package name is "fuse-ntfs-3g" in rpm.

Jatin Bhardwaj: Thanks! So it means that using this we can use the hard disk partition too?

Elangovan Arumugam: Yes. If you have dual boot with Windows and Linux, you can access Windows partition by working on Linux.

Hassan Baghdad:

Any idea about the kickstart and pxe boot and how they work?

Like · comment

Elangovan Arumugam: Pxe boot uses tftp server along with http & dhcp server. For setting up a preboot environment, the kickstart file also plays an important role in pxe for auto installation. It's very difficult to configure all the services perfectly. So, it would be a good idea to consult any RHCE trainer for a detailed explanation...

Hassan Baghdad: Thank you so much!

Mahesh Patil: datadsk.co.uk/html_docs/redhat/rh_pxe.html

Hassan Baghdad: Thanks!
