

front-end for the open source Cuckoo malware analysis sandbox that serves as an alternative for users who don't have the resources or time to operate a Cuckoo installation.

SU2: An open source application to study fluid dynamics

An open source application that enables users to model the effects of fluids moving over aerodynamic surfaces has been developed by engineers from Stanford University. The application, called SU2, is a free software package that can be fully customised as per the user's needs. It can reportedly incorporate everything an engineer needs in order to perform a complete design loop to optimise the shapes of aerospace systems.

SU2 also comes with a quick-start guide and in-depth tutorials to help its users understand it easily. It has a public forum to enable users and developers to seek advice and post support questions.

Here comes Red Hat Enterprise MRG 2.1

Red Hat has announced the release of version 2.1 of its Red Hat Enterprise MRG (Messaging, Realtime, and Grid) product. It extends and optimises the real-time (RT), messaging and cluster capabilities of Red Hat Enterprise Linux (RHEL). The software is used in environments such as the financial sector, where its capability to process a large number of transactions within quick response times is important.

Google's Android Menu button is officially dead

Soon after the release of the Samsung Galaxy Nexus, the first Android 4.0 Ice Cream Sandwich phone, Google has decided to do away with the Menu button. From now on, the handsets will have just three buttons—the Back, Home and Recent Apps buttons at the bottom of the phone.

Google is now recommending that app developers should begin using the 'action bar' instead of the Menu button. The former is a small dedicated space that identifies the application and what actions users can take.

New Android app that teaches you how to make jewellery

A new application has been developed by Webelinx for Android mobile phones, which teaches its users how to make jewellery based on their tastes. The app 'How to make jewellery' helps users with videos that show how to create beaded and other types of jewellery. There are more than 400 videos available in the application, and new videos are updated regularly. The application can be downloaded from the Android Market. The videos are meant for both beginners and professional jewellery makers. They have step-by-step instructions to make all types of jewellery including necklaces,

An Android-based vacuum cleaner!

Samsung has developed an Android application for the Navibot, a robotic vacuum cleaner, to help users control the robot remotely via their Android handsets.

Navibot S is a robotic vacuum cleaner, which is an improved version of the older Navibot. It comes with several modifications, including finding its way through your living room with the help of its camera. The camera takes pictures at a rate of 30 frames per second, turning them into a digital map of the room. This helps in avoiding cleaning the same spot repeatedly. The camera also acts like a webcam, and the video can be viewed through your phone—which is useful when the burglar alarm goes off, or when you want to keep an eye on your pet or little child.

The device has an intelligent mapping technology, which helps it to clean the room or house conveniently. The application also uses the microphone and camera of the phone to let you know the location of the robot. Navibot S automatically empties the garbage in a central dustbin. It also goes back to the docking station when it senses that its battery is low. It resumes work after it empties its dustbin and is recharged.

Navibot, the previous version of the vacuum cleaner, is already available in certain markets like Singapore. This new version is likely to be available in the next six months or so. It is not yet known whether Navibot S will be available in India or not. However, a similar automatic vacuum cleaner called Euroclean Robocleanz, from Eureka Forbes, is already available in the country. It is priced at Rs 6,600, but lacks the phone control feature.
