

Bengaluru hosts JUDCon 2012

Red Hat recently hosted Asia-Pacific's first JBoss Users and Developers Conference (JUDCon) at the NIMHANS Convention Centre in Bengaluru.

The 'by developers, for developers' conference brought together over 800 visitors, and included developers, users and the

managements of various organisations, making it the largest JUDCon ever.

JUDCon 2012 included presentations, demonstrations and discussions, and revolved around topics like JBoss AS7, Infinispan, Drools and OpenShift. Speakers ventured into JBoss Community projects like JBoss Application Server 7, and spoke about how these projects have been incorporated into the enterprise-ready JBoss Enterprise Middleware. "The development community in India is expanding at an amazing rate, and we want to give the community a unique, hands-on opportunity to fully experience what is going on with open source middleware," said Anuj Kumar, general manager, the Indian subcontinent, Red Hat. The conference also featured new projects and technologies that help developers address everyday challenges, as well as take advantage of mobiles, the cloud and HTML5.

The keynote address by Bruno Georges, director, Software Engineering Enterprise Application Platforms, Red Hat Asia Pacific, explored the changing face of middleware, and its role in mobile applications and the cloud. He noted how trends like the abundant availability of processing power and software stacks were moving towards ubiquitous computing, i.e., ever shrinking handheld devices are capable of running these software stacks.

Georges also spoke about why India is an emerging market for Red Hat. He said, "There is a strong sense of community that is catching up gradually in India. JUDCon had hundreds of participants this year and we saw many comments coming from the Indian community. They have been exposed to many kinds of open source technologies and are aware of the choices they have. Considering that JUDCon and the Fedora Users and Developer's Conference (FUDCon) were conducted in India, it says a lot about how active the community is. The community is also growing in numbers. In fact, we had close to a million unique visitors to our website coming from India last year. This is an enormous number, and is second after the US. The number of visitors has been increasing each year at a very rapid pace."

Because of the fast pace of growth in the open source community here, India inevitably provided the venue for the conference. "Many of the best open source developers are based in India and the surrounding regions," commented Dr Mark Little, senior director, Engineering, Middleware Business, Red Hat. "We are thrilled to bring one of the world's premier developer conferences directly to them. This is a fantastic opportunity for these developers to congregate, engage in lively discussions, and find out about the latest in the JBoss Community and the open source community, in general," he added.
