

Figure 14: Completing the table

Scale it down in the front view. After shifting to the top view, scale it to a rectangular shape, as shown in Figures 11 and 12.

Now you have a basic table-top shape. Create another cube, scale it down uniformly to sit below the table top in the front viewport. Scale it from top to bottom to form one leg of the table. Copy it thrice to make the other three legs. Join the legs to the table top with the Boolean command of *union*, as shown in Figures 13, 14 and 15.

You are now done with the basic shape of the table. You could further tweak it to your liking. Now hide the table too, after having joined all the parts, and rename the object as 'Table'.

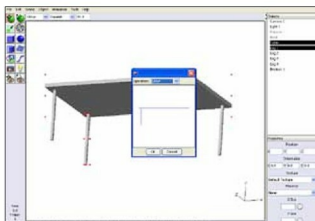

Figure 15: Boolean operation on the table

In the next article in this series, we will continue with building the wall. **END** 

By: Dr Vivek Chauhan

The author works as a professor in the Department of English at Sri Sathya Sai Institute of Higher Learning, Bengaluru. A 3D enthusiast, Vivek is proficient in handling open source 3D software like Wings 3D, Blender, K-3D, Art of Illusion, etc. He likes to share knowledge related to 3D with all those interested in honing their skills in this domain.
