

Figure 7: Dialogue window

Figure 10: Slot function

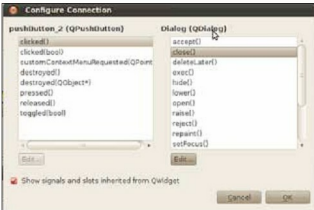

Figure 8: Configure connection

Figure 9: Go to slot

```
#include <QtCore/QCoreApplication>
#include "test.h"
int main(int argc, char *argv[])
{
    QCoreApplication a(argc, argv);
    test t1, t2;
    QObject::connect(&t1, SIGNAL(valueChanged(int)),
    &t2, SLOT(changeValue(int)));
    QString name = "manoj@nxitsolutions.com";
    t2.setName(name);
    t1.setValue(225);
    return a.exec();
}
```

```
#ifndef TEST_H
#define TEST_H
#include <QObject>
class test : public QObject
{
    Q_OBJECT
public:
    explicit test(QObject *parent = 0);
    void setValue(int);
    void setName(QString &name);
signals:
    void valueChanged(int newValue);
public slots:
    void changeValue(int newValue);
private:
    int value;
    QString str;
};
#endif // TEST_H
```

And here is test.cpp:

```
#include "test.h"
#include <QtCore>
test::test(QObject *parent) :
    QObject(parent)
{
}
```
