

Here comes Joomla! 2.5.4

Version 2.5.4 of Joomla! includes three new features and fixes 157 tracker issues. The latest update to the 2.5.x branch of Joomla!'s open source content management system (CMS) addresses two vulnerabilities. According to the developers, it closes an information disclosure hole that could lead to unauthorised access to administrative information. It is also said to fix a problem that an attacker could exploit to conduct cross-site scripting (XSS) attacks. Users can now download Joomla! 2.5.4 from the project's site.

Sqoop becomes an Apache top level project

The Apache Software Foundation (ASF) has announced that Sqoop, the data transfer tool for Apache Hadoop, has graduated from the Apache Incubator to become a Top-Level Project (TLP). "The Sqoop Project has demonstrated its maturity by graduating from the Apache Incubator," explained Arvind Prabhakar, vice president of Apache Sqoop. "With jobs transferring data, Sqoop is proving its value as a critical component of production environments," he said. Sqoop entered the Apache Incubator in June last year. It was soon embraced as an ideal SQL-to-Hadoop data transfer solution.

Linux Tycoon beta arrives

Linux Tycoon allows players to manage the daily tasks related to creating a popular Linux distribution. The beta release of the Linux Tycoon game has been released by Bryan Lunduke, software developer and host of the Linux Action Show podcast. Linux Tycoon 1.0 Beta is priced at \$4. As to why it is in beta, Lunduke explains: "Finding the right balance between a 'super fun, easy to play video game' and 'an accurate simulation of building a large Linux Distro' is a bit tricky. And I need your feedback... The plan is to update Linux Tycoon rapidly in order to maximise both the 'fun' and 'technical accuracy' factors."

Android 4.0 for Nexus S 4G finally arrives

The much awaited Android 4.0 a.k.a. Ice Cream Sandwich is finally on Galaxy Nexus. The announcement was made on the Sprint Community Page. It is an OTA (Over The Air) release, which will be rolled out during the coming weeks to Galaxy Nexus 4G devices. Users can manually install the upgrade by going through their settings, then clicking on the *About* option on the phone.

Some of the important enhancements and fixes that will come along with Android 4.0 are:

Ringmark now open sourced

First announced at Mobile World Congress, the Ringmark mobile browser test suite has now been open sourced.

Facebook engineer Matt Kelly announced in a blog post that they were open sourcing Ringmark so that anyone could

contribute tests and, very soon, they would contribute Ringmark tests to the Core Mobile Web Platform Community Group in the W3C as well. Ringmark was created to help developers discover which browsers for mobile devices best support the functionality required by their apps.

LibreOffice 3.5.2 released

The Document Foundation has announced the release of LibreOffice 3.5.2, which addresses more than 90 bugs found in the program's core. The second maintenance update to the 3.5.x branch of LibreOffice adds no new features. Users can now download

the latest version of LibreOffice for Windows, Mac OS X and Linux from the project's site. "The Document Foundation continues to grow month after month, with a constant flow of new hackers and volunteers taking care of development, quality assurance and localisation," said Florian Effenberger, chairman of the board, adding: "... the growth of pure code hackers – who are now 429 (376 if we do not include the former Sun/Oracle employees) – being the most impressive achievement."
